PRACTICAL-5

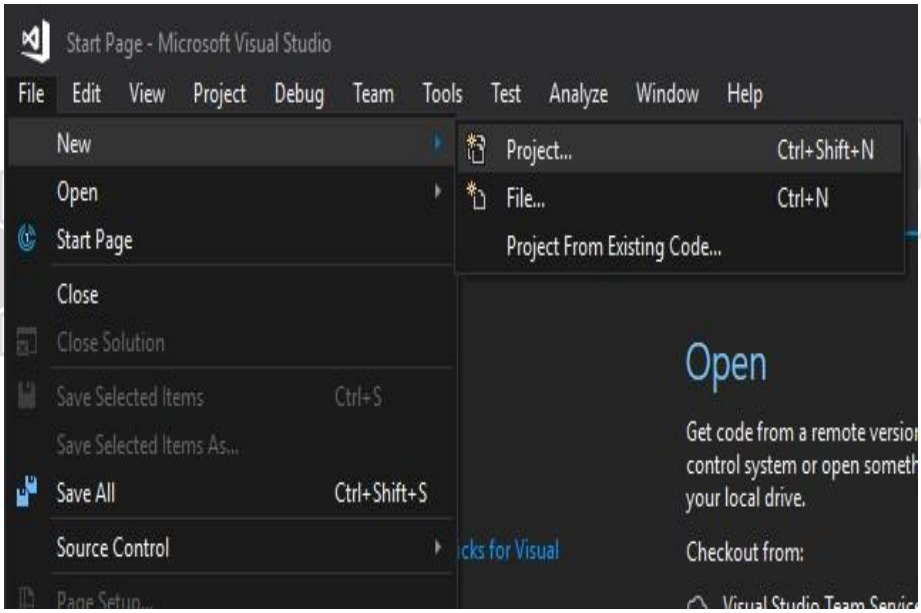

Aim: Develop client which consumes web services developed in different platform.

Requirement:

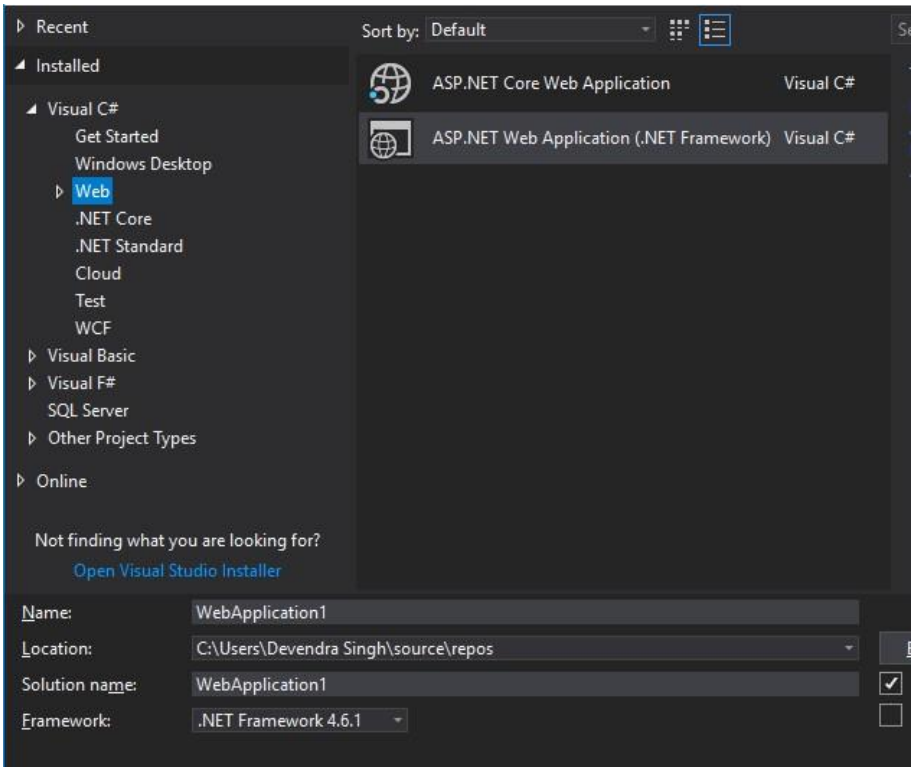

1. Visual Studio Community 2017
2. Version : 15.8 or latest

In this practical we are creating Web Service in Visual Studio ant then we will consume it in NetBeans.

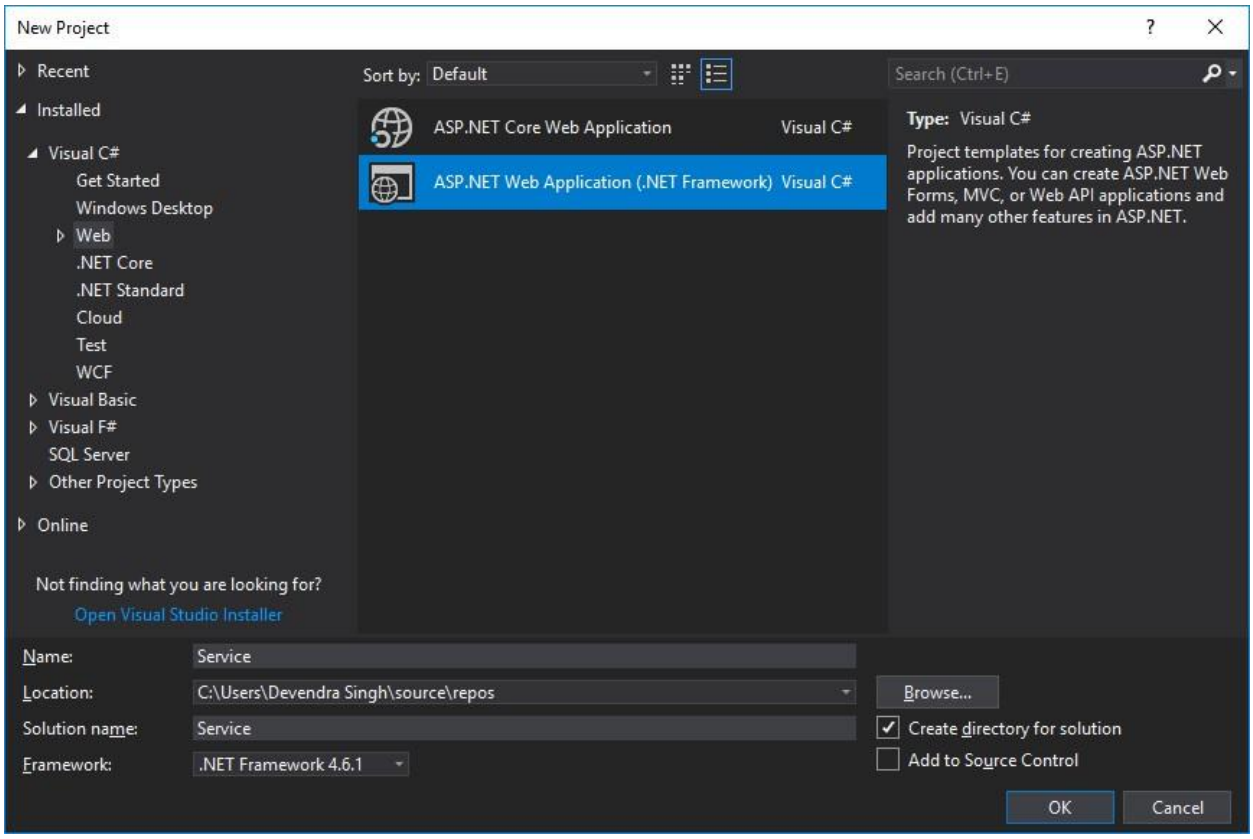

1. **Open Visual Studio IDE** and **click on File**. **File -> New -> Project**

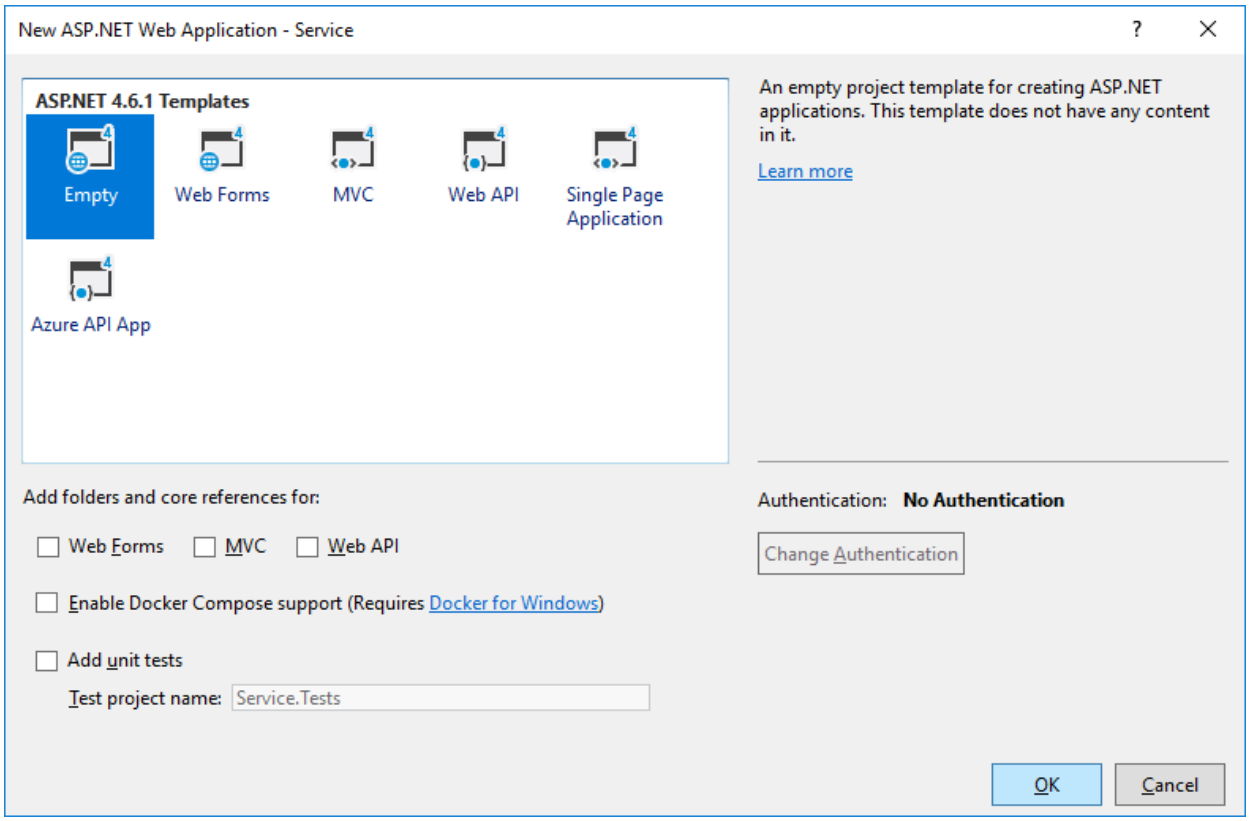

2. **Click on Web**.

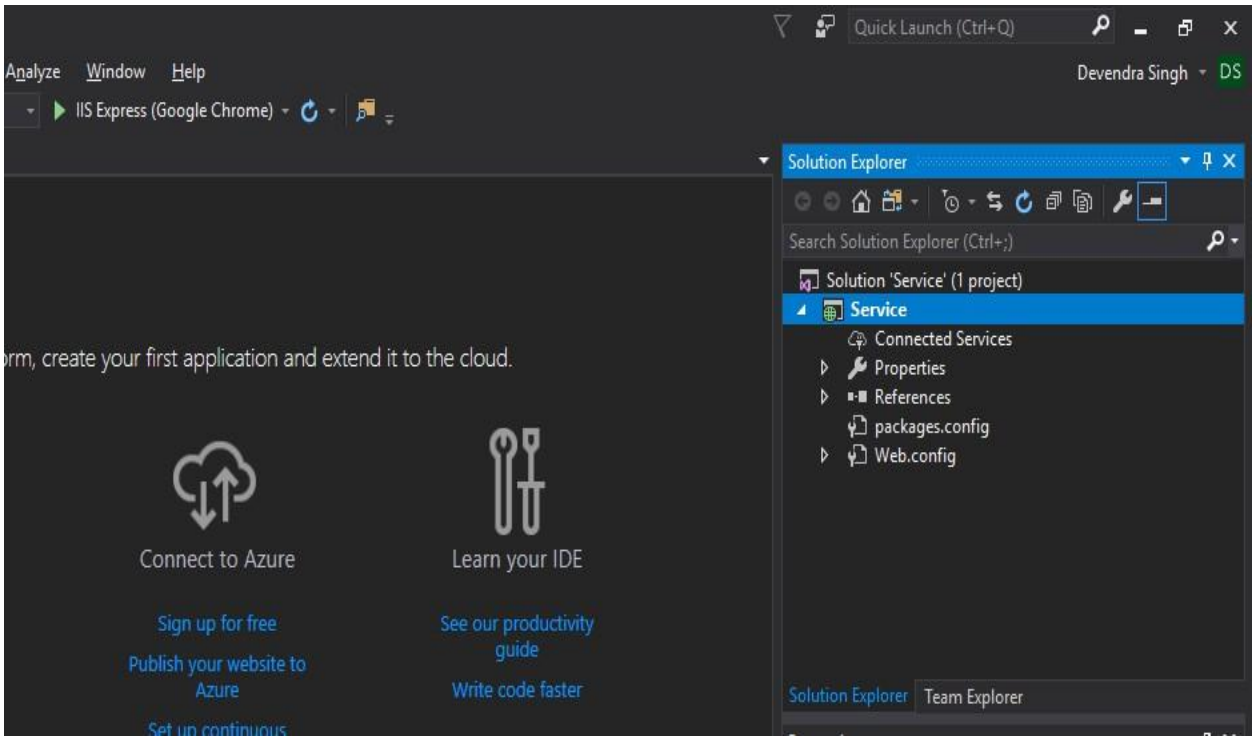

3. **Select ASP.NET Web Application** and give **Name** as **Service**. After that **click on OK** button.

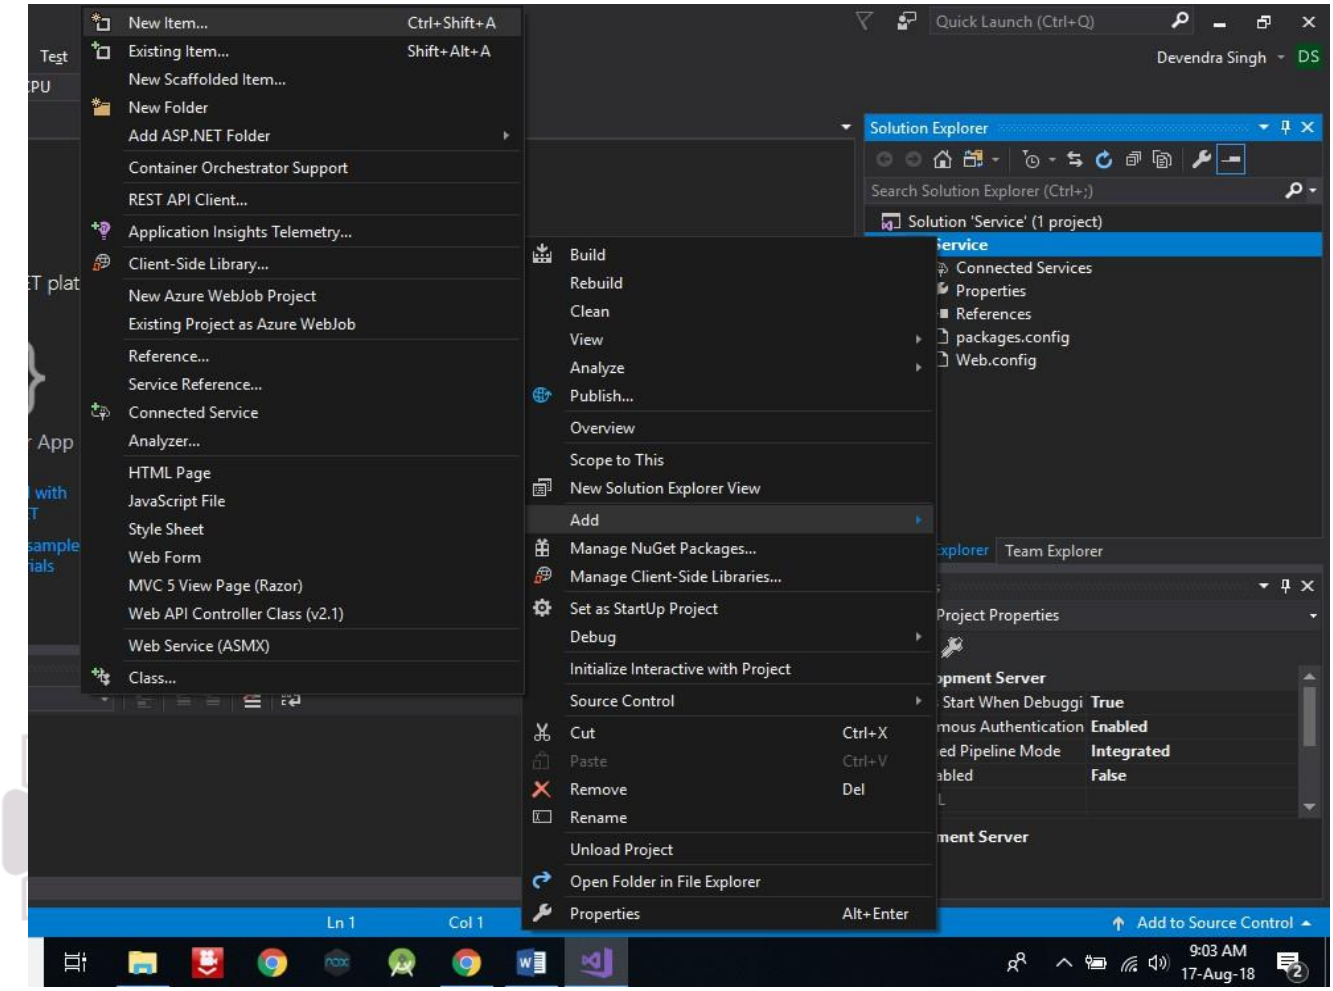

4. **Select Empty** and **click on OK** button.

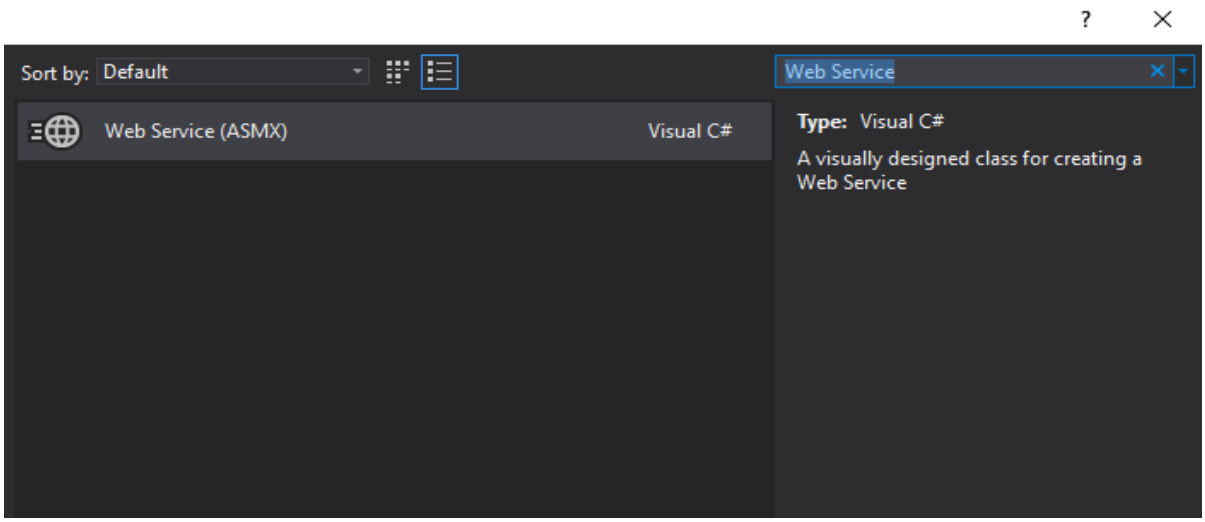

5. Now you can see, on right side in Solution Explorer Service project is created.

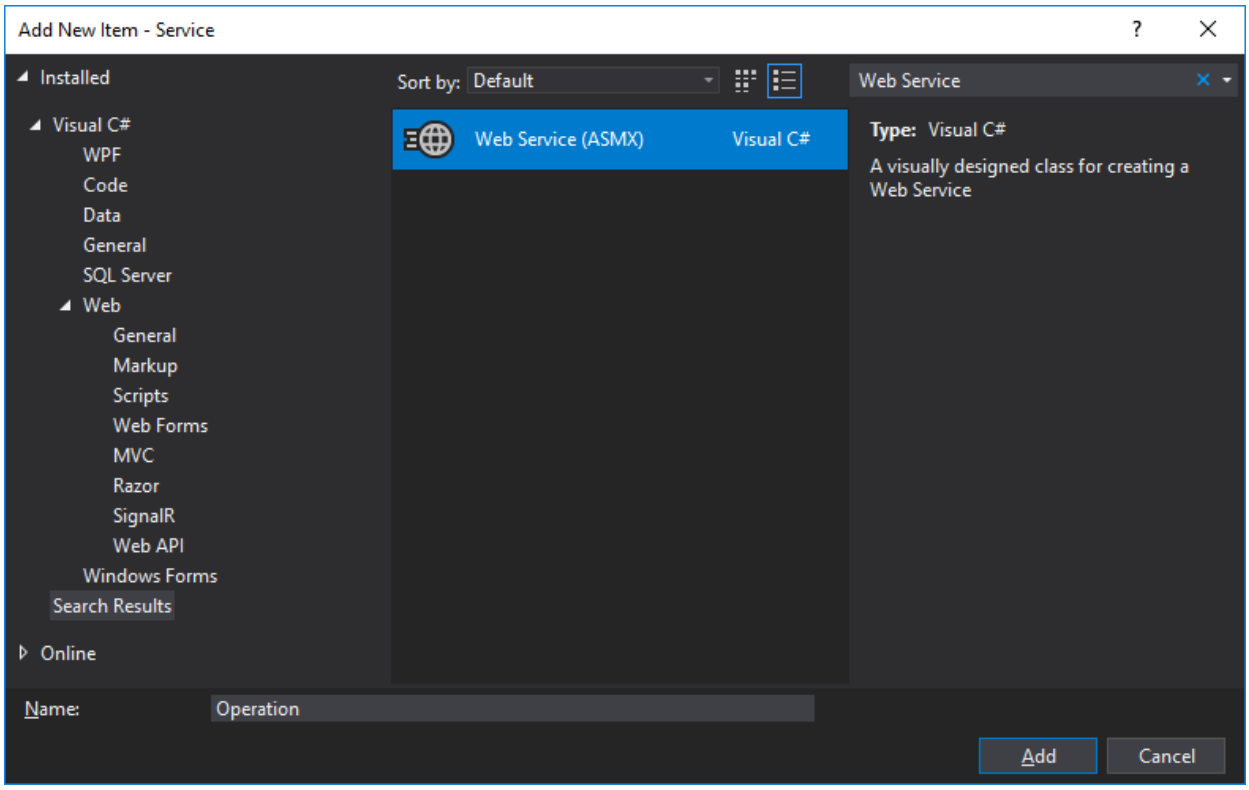

6. Right click on Service -> Add -> New Item.

7. Search for Web Service.

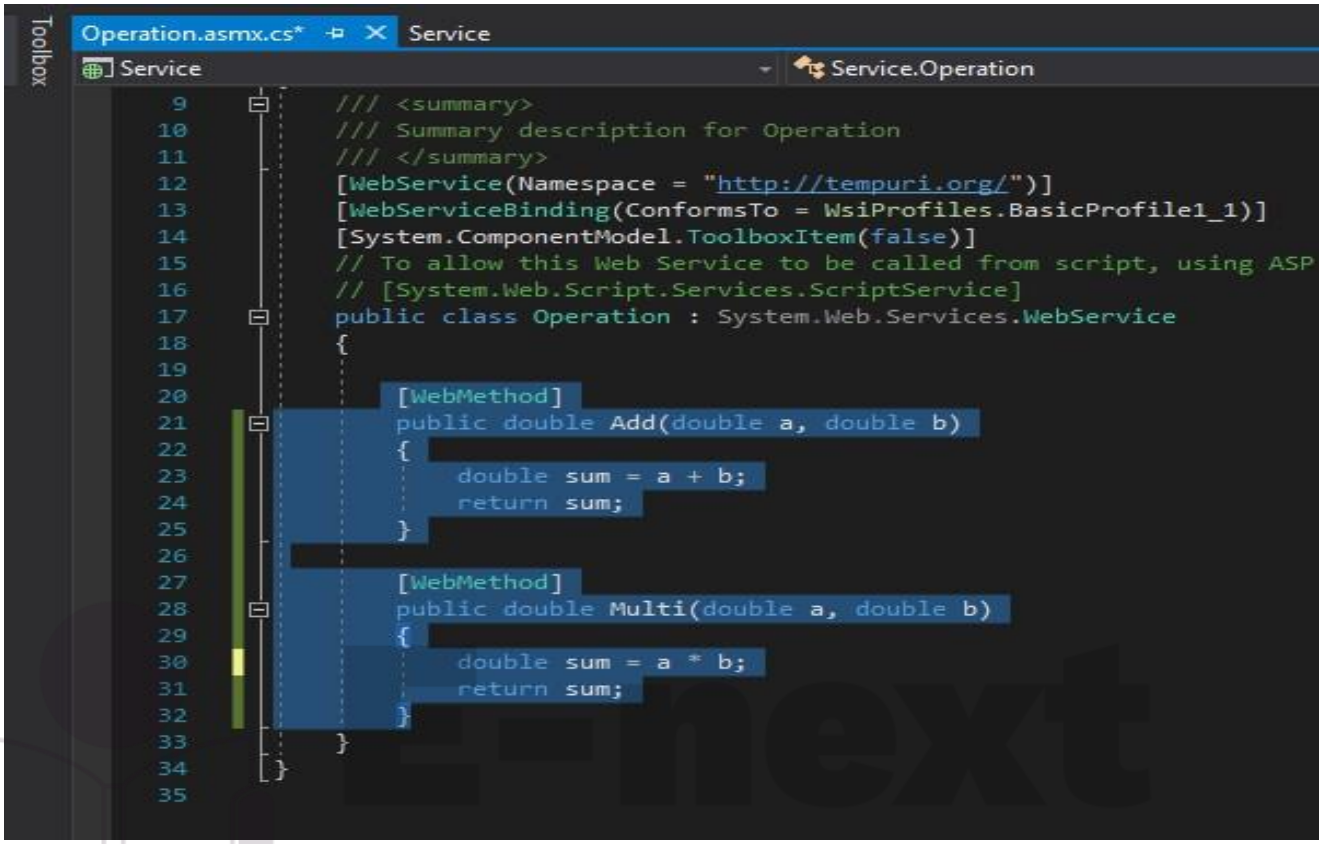

8. **Select Web Service** and **give Name** as **Operation**. After then **click on Add** button.

9. After click on Add button, Operaion.asmx.cs file will be automatically open otherwise open it from Solution Explorer and **Add the following code into Class Operation**.

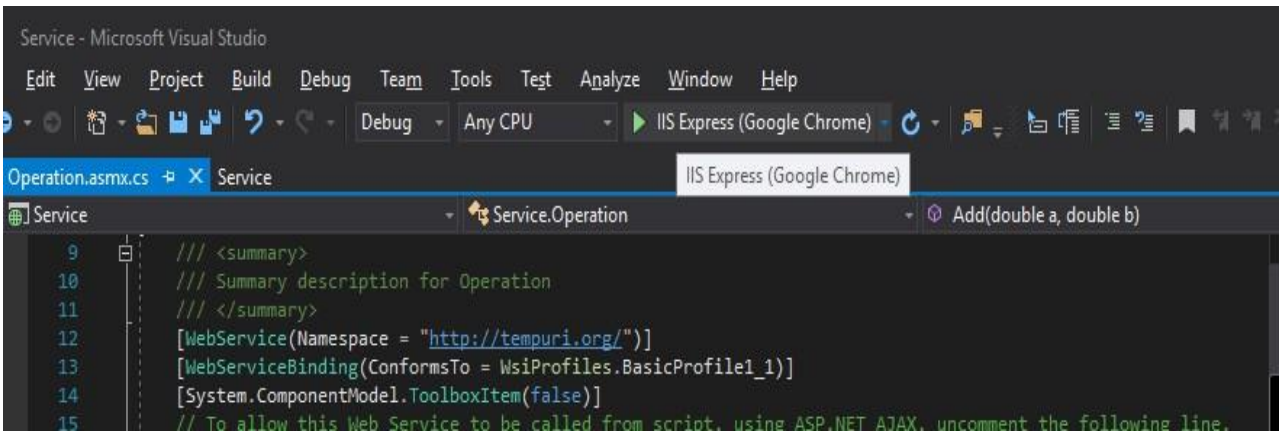

```
[WebMethod]
 public double Add(double a, double b)
 {
    double sum = a + b;
    return sum;
 }

 [WebMethod]
 public double Multi(double a, double b)
 {
    double sum = a * b;
    return s
}
```

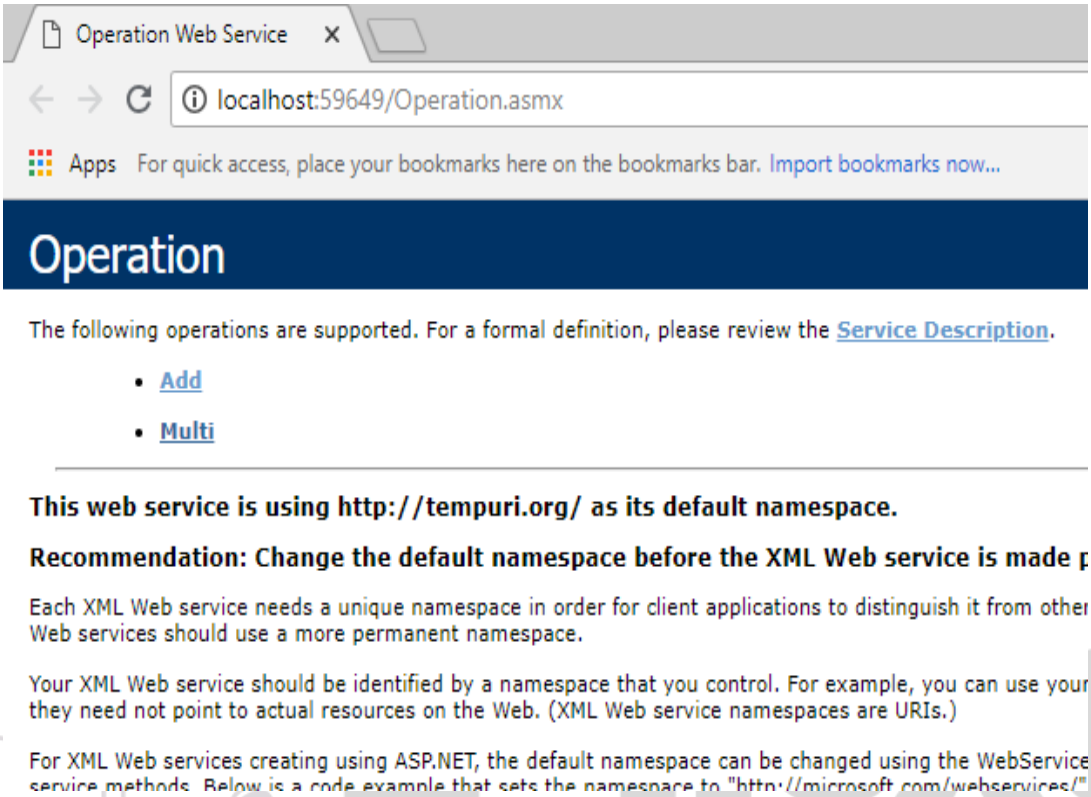

After that press Ctrl+S to save the methods. Actually we are creating two methods for Web Service. One is for addition of two numbers and second one is for multiplication of two numbers.

10. Now **run the project** by **click on Green arrow button below the Window menu**.

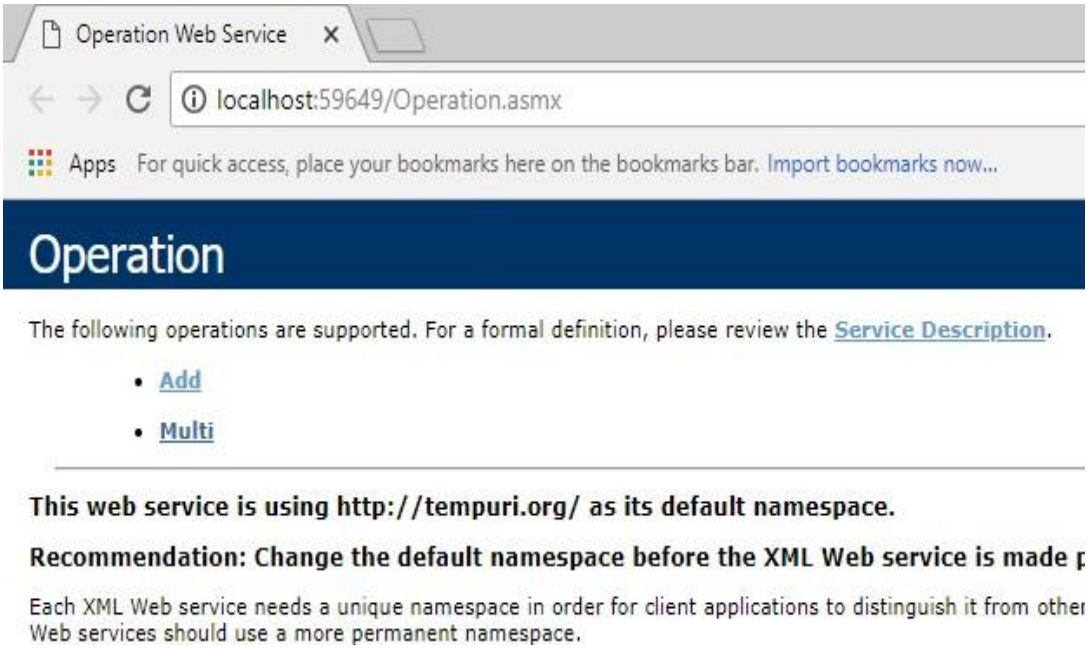

11. A window will open in browser and that is our web service.

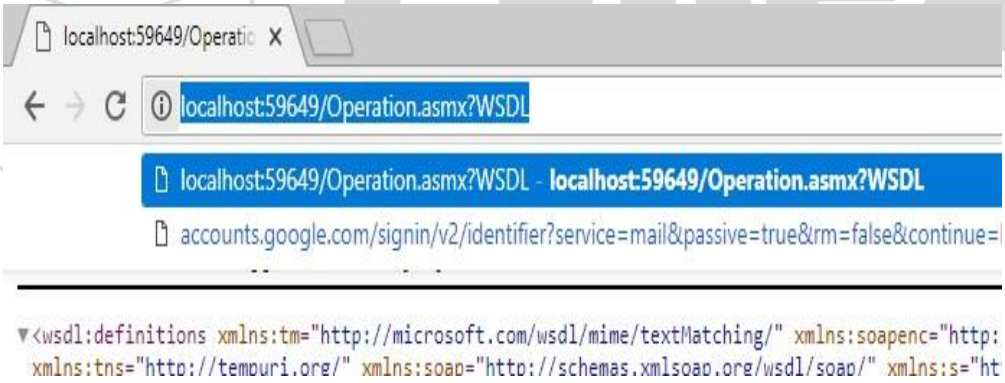

12. You can check services by click on Add or Multi option. But we don't need this.

13. Now **click on Service Description** option.

THE NEXT LEVEL OF EDUCATION

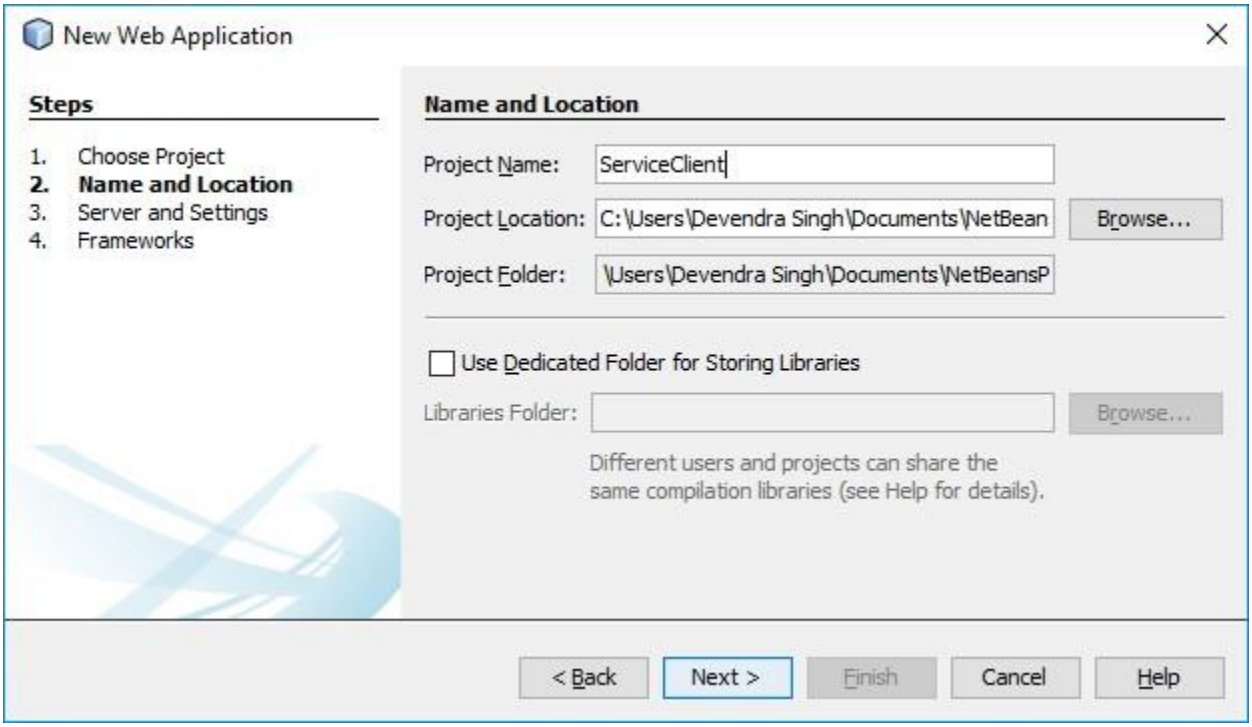

14. Now a new window will open. **Select the link and copy it**. **We will use this link in NetBeans to consume these services**.

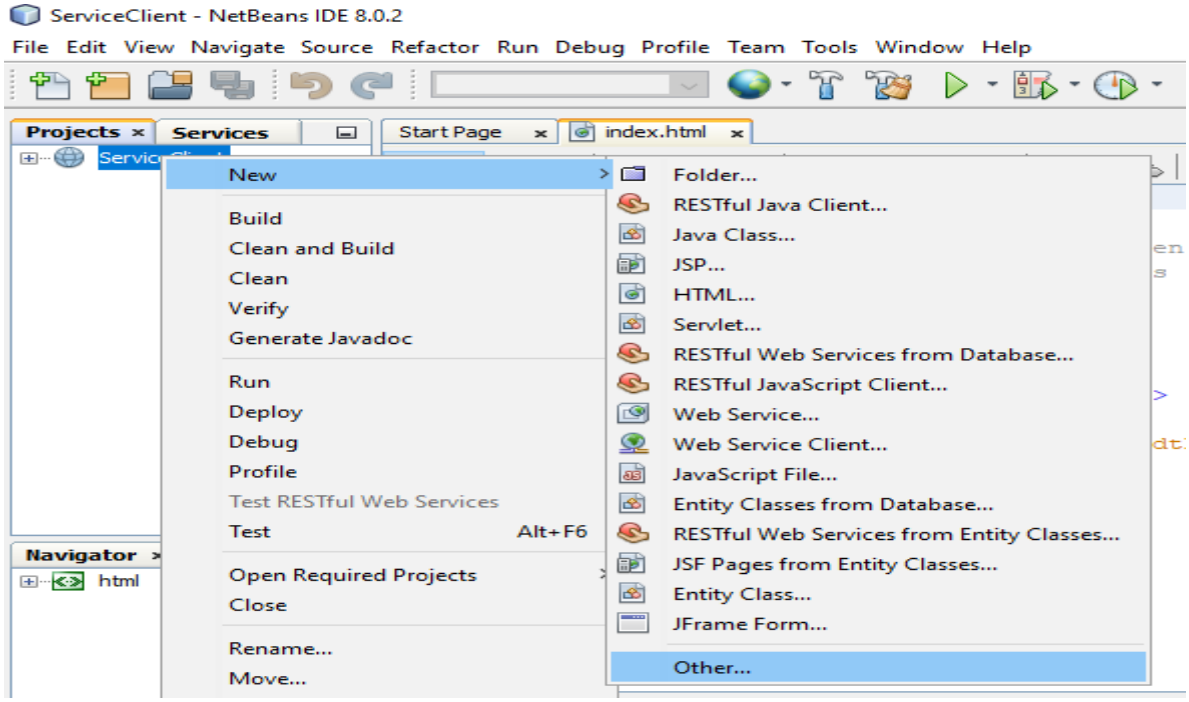

15. **Don't close Visual Studio and browser, just minimize it otherwise server will stop. But save the link anywhere**, so that we can use it later.

16. Now **open NetBeans**.

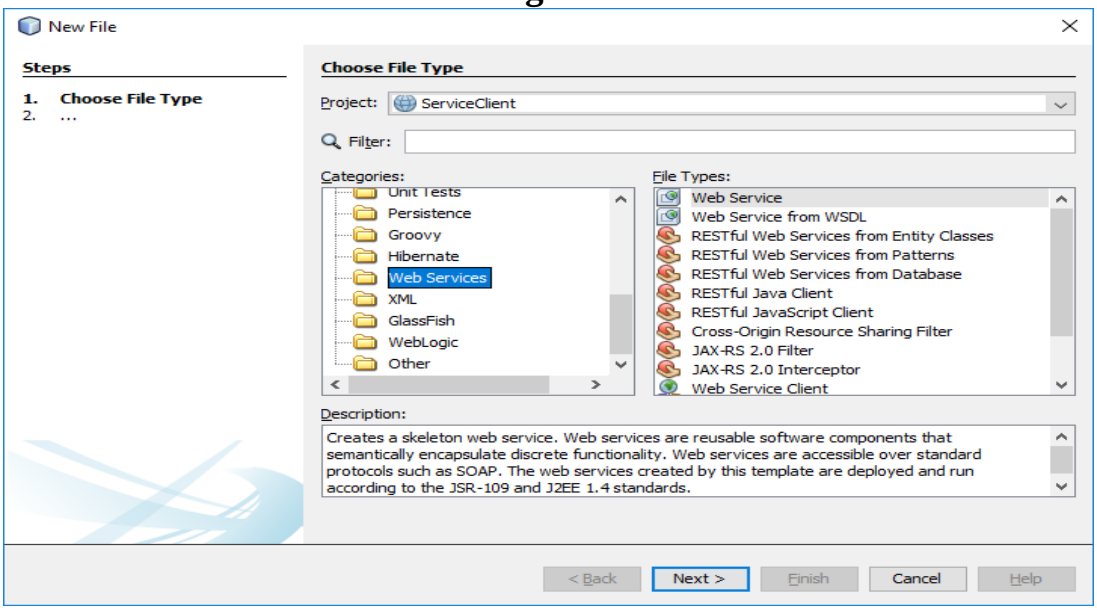

17. **Create a Web Application with name ServiceClient. Next -> Finish**.

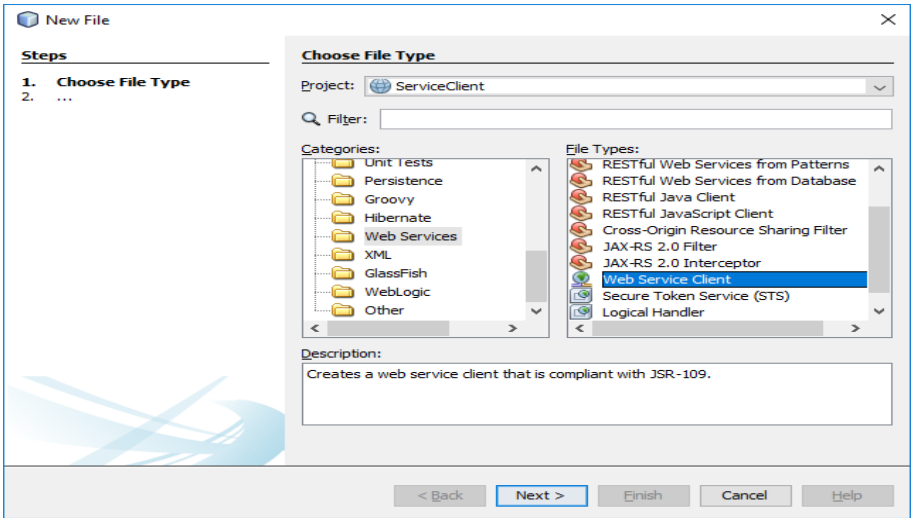

18. Now **create a Web Service Client**.
Right click on ServiceClient -> New -> Other.

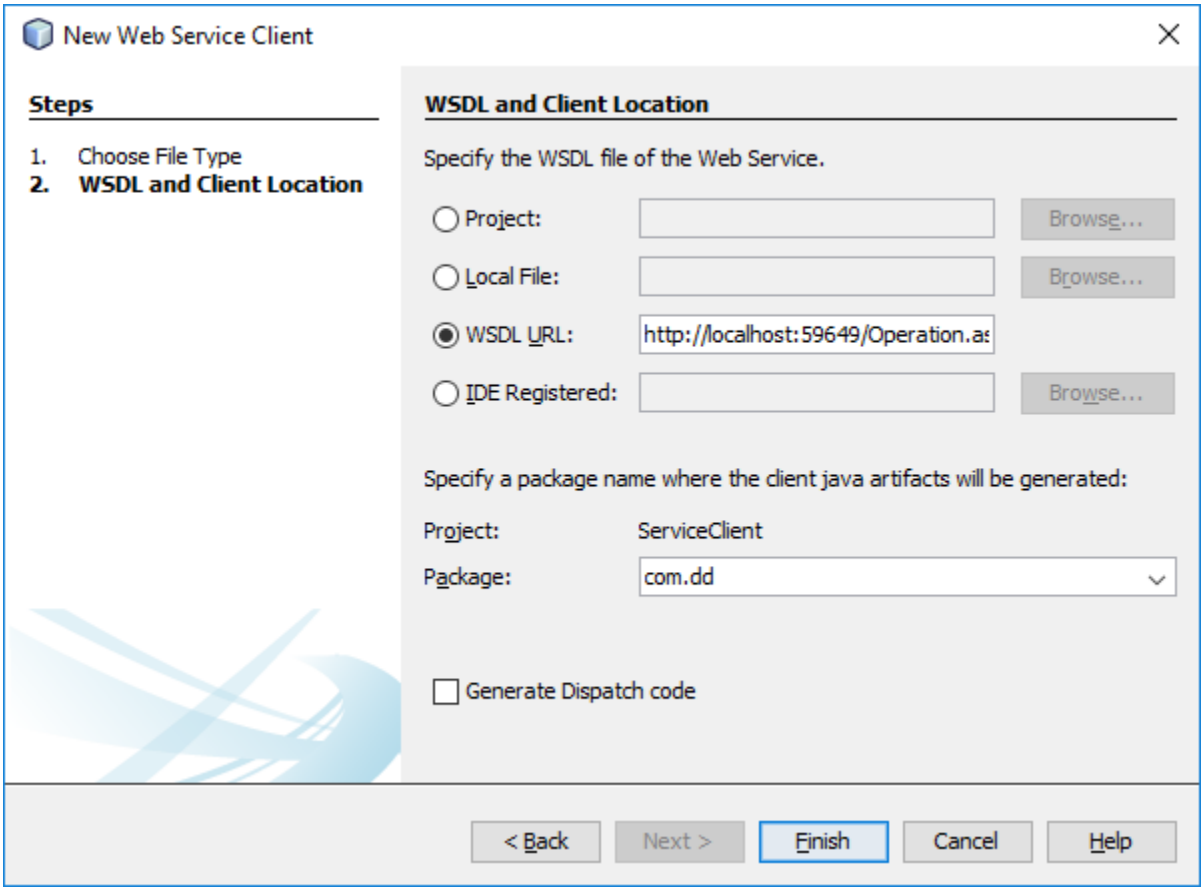

19. Now **select Web Services in Categories** section.

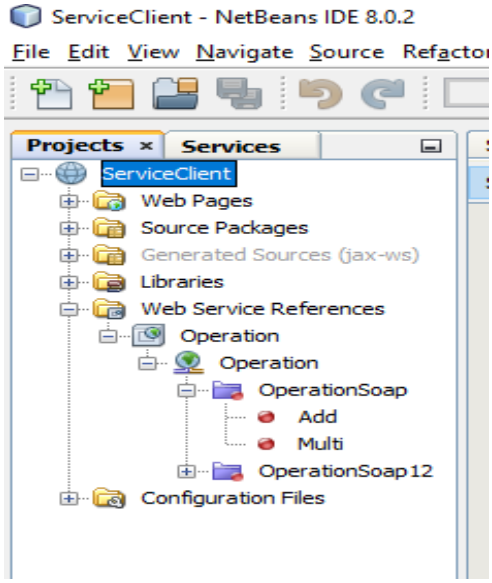

20. **Select Web Service Client in File Types** and **Click on Next** button.

21. **Select WSDL URL and paste the link** that you have copied from browser on run of Visual Studio **enter package name com.dd**. After that **click on Finish** button.

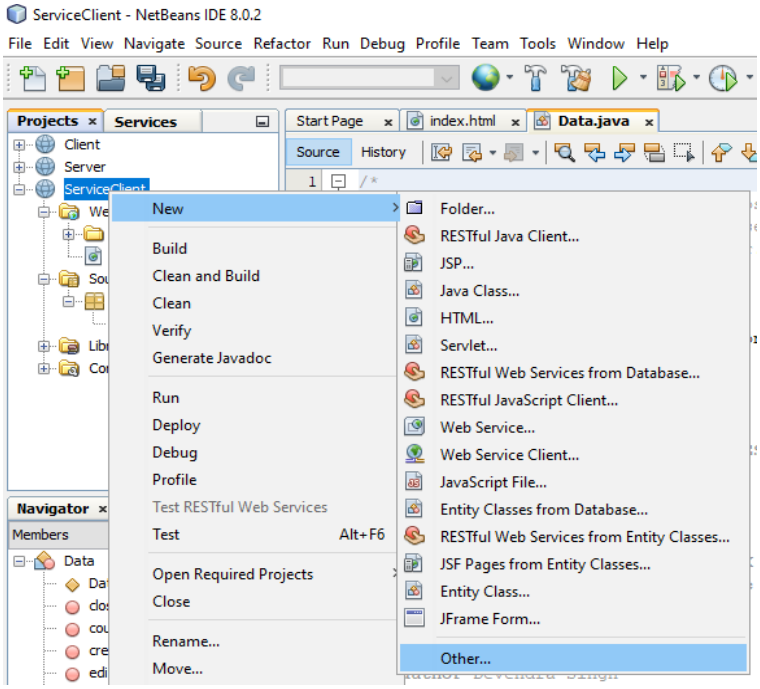

22. As you can see, we got both the service methods i.e. Add & Multi. But in this practical I'm going to use only one service method. You can do for both also.

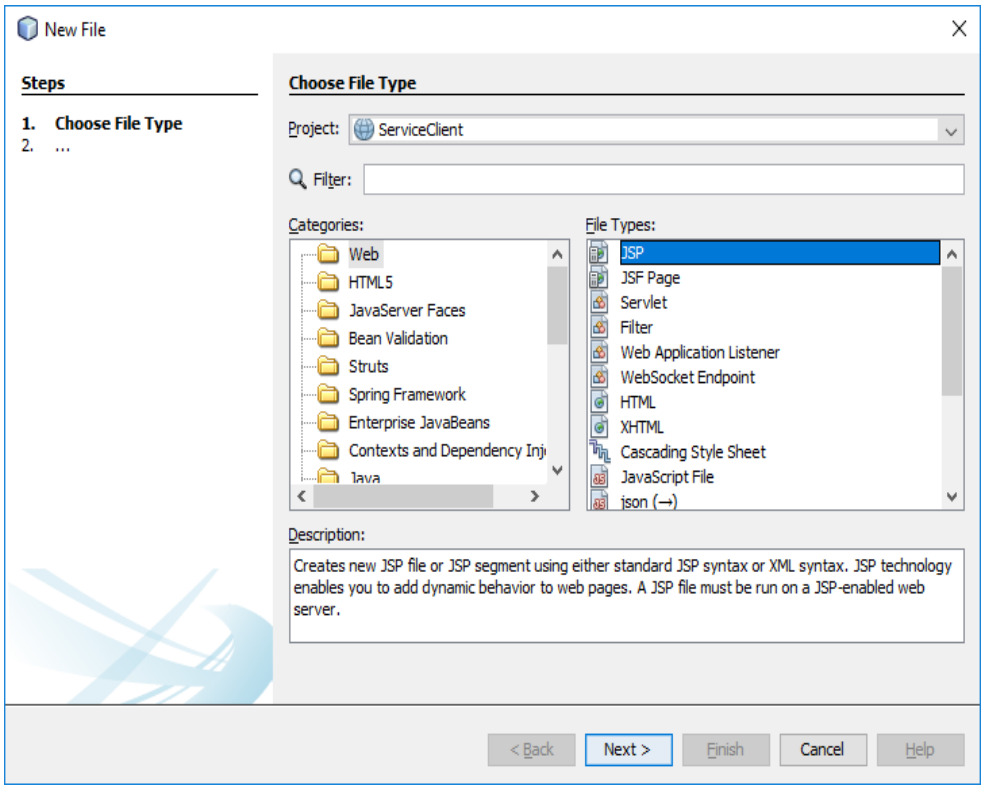

23. Now create a JSP page. **Right click on ServiceClient -> New -> Other**

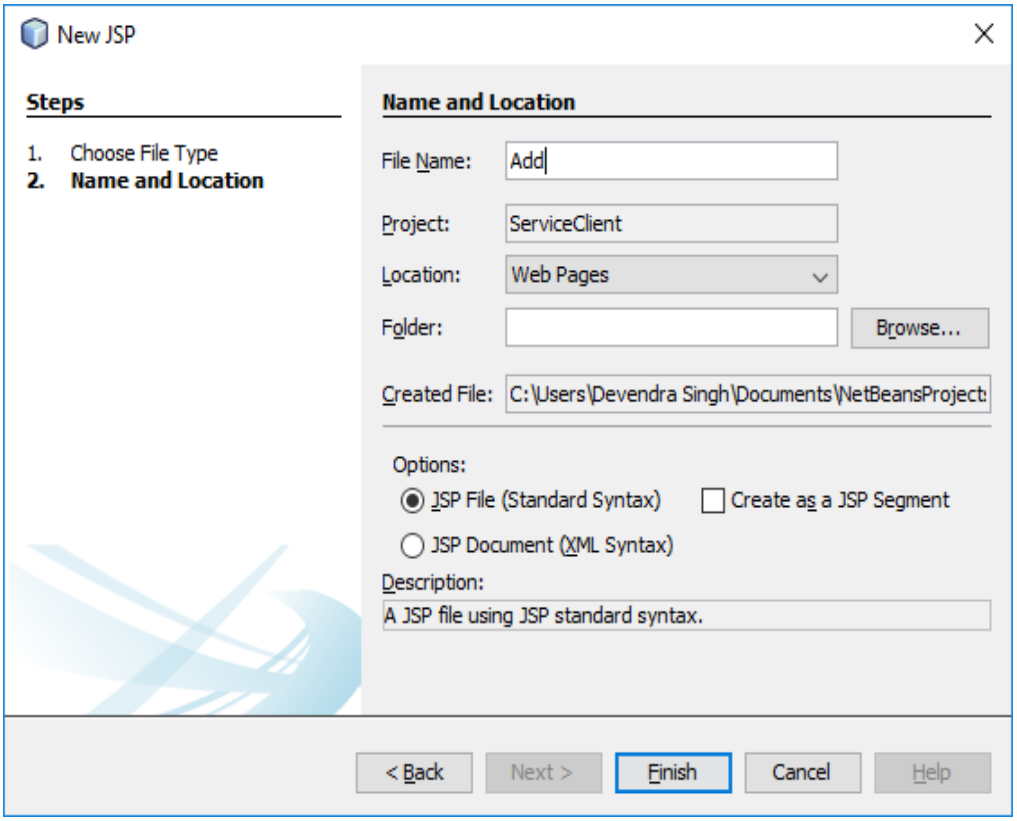

https://E-next.in

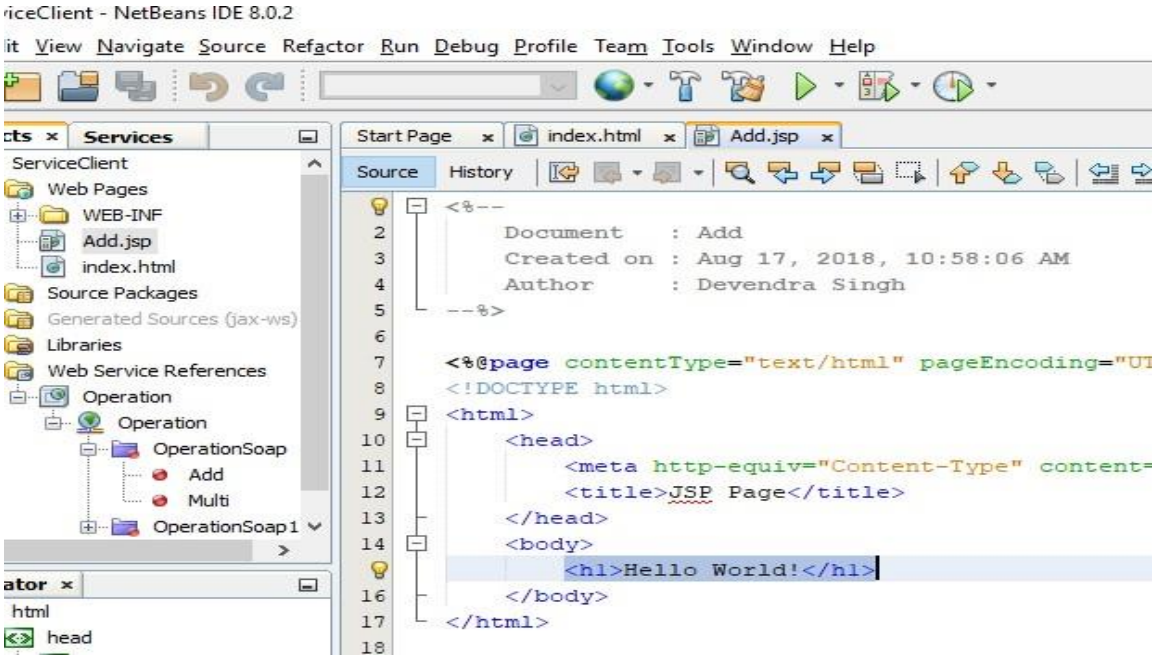

24. Select Web in Categories section -> Select JSP and click on Next button.

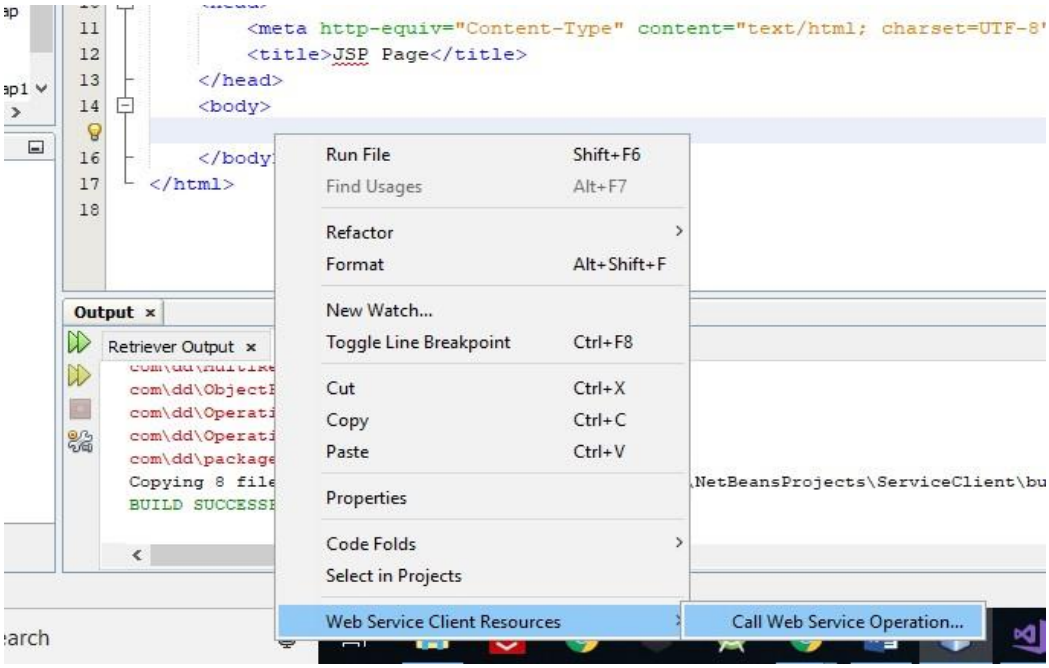

25. **Enter File Name Add** and **click on Finish button**.

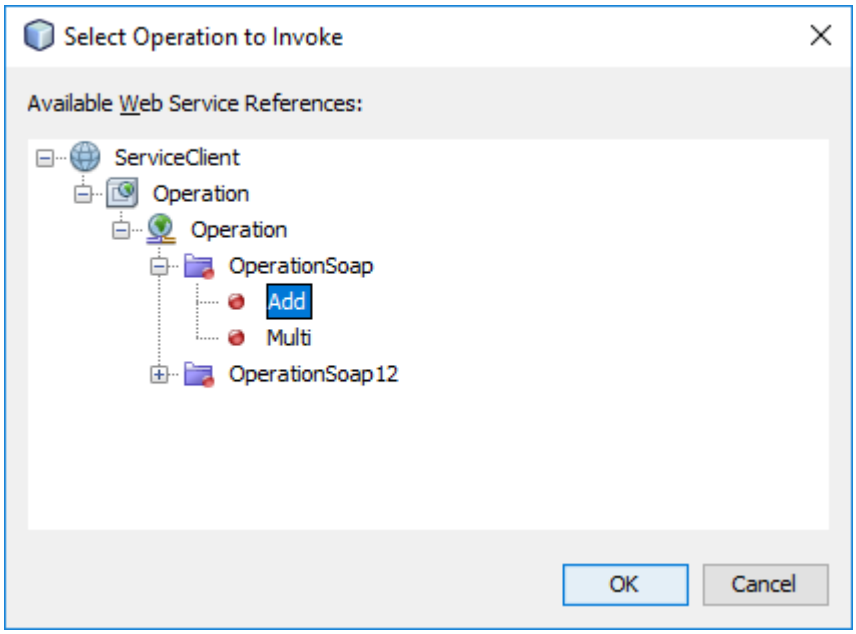

26. **In Add.jsp file delete the selected part in body tag**, because we don't need this.

27. **Right click between body tag** and **select Call Web Service Operation**.

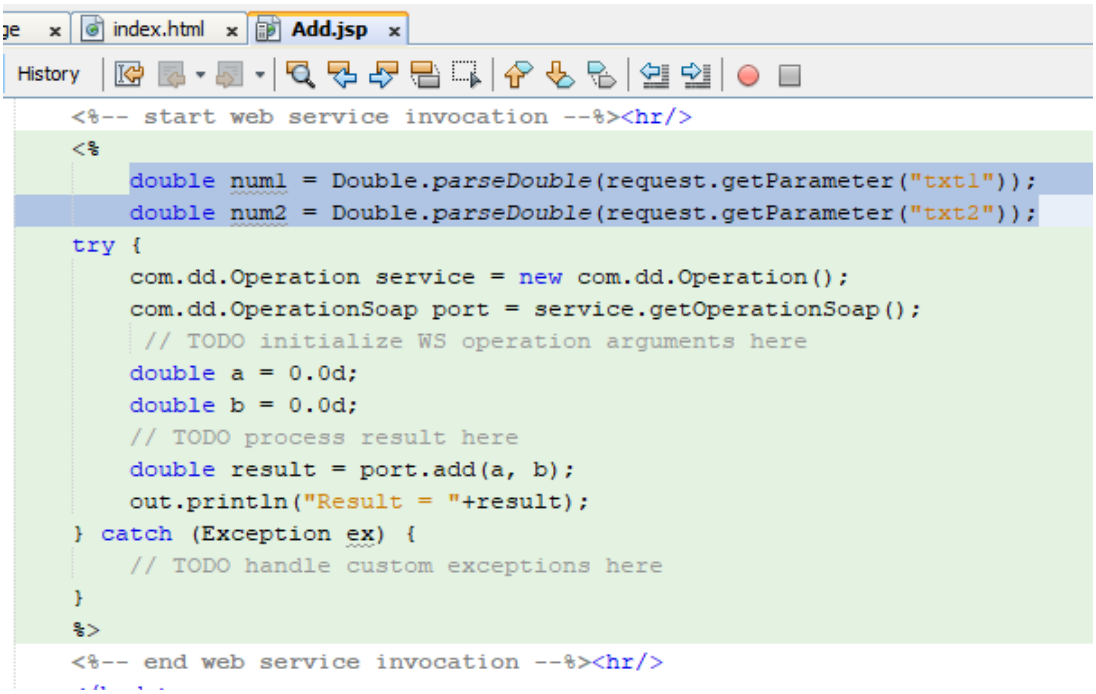

28. **Expand and select Add**. After select, **click on OK** button.

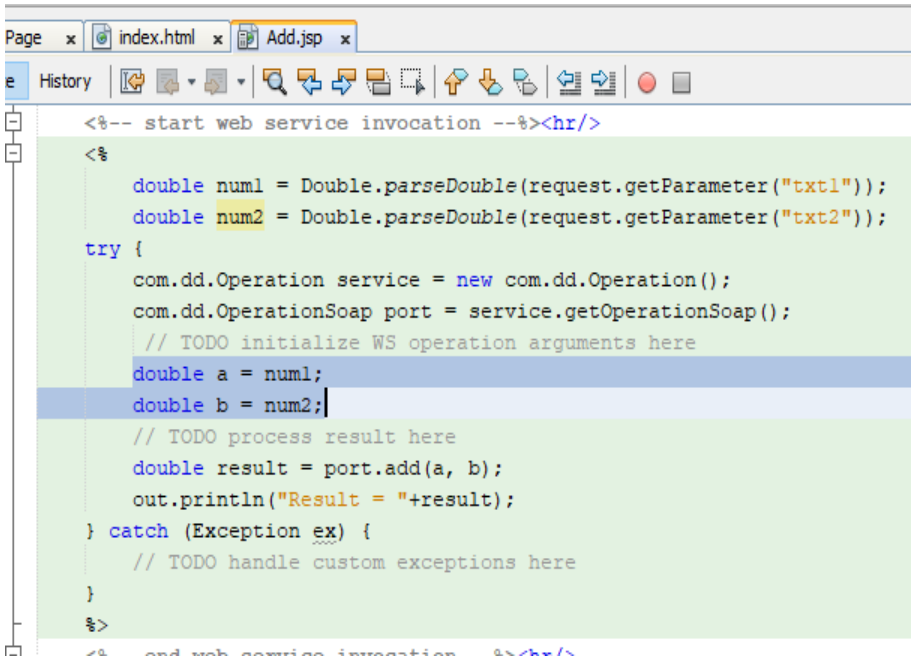

29. Now **add the following code outside of try block**.

```
double num1 = Double.parseDouble(request.getParameter("txt1"));
double num2 = Double.parseDouble(request.getParameter("txt2"));
```

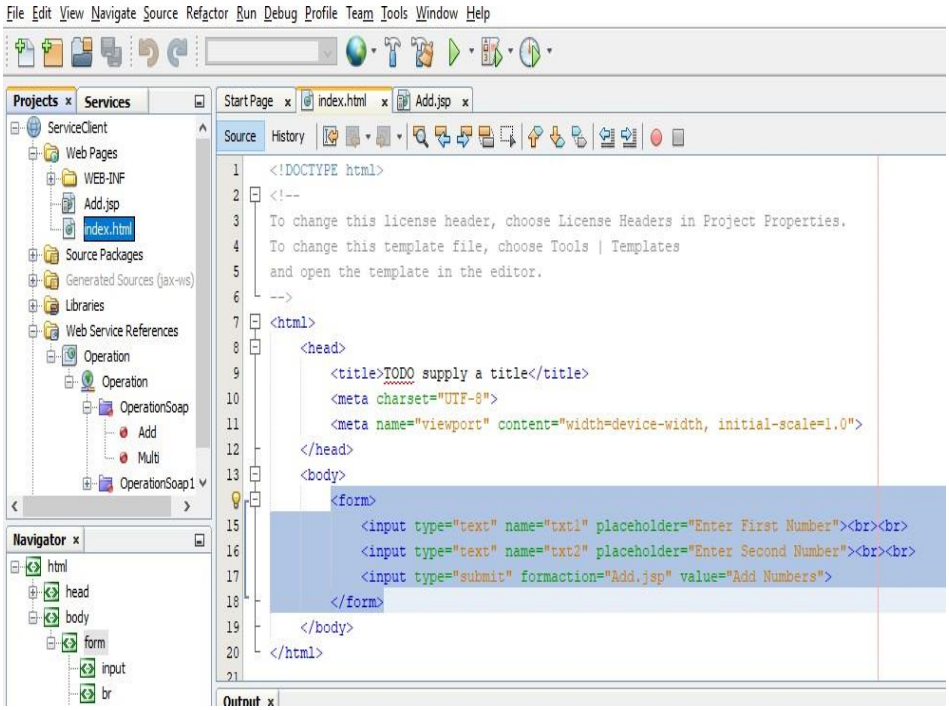

30. Now **pass num1 & num2 to a & b variable respectively**. After that **press Ctrl+S** to save this code.

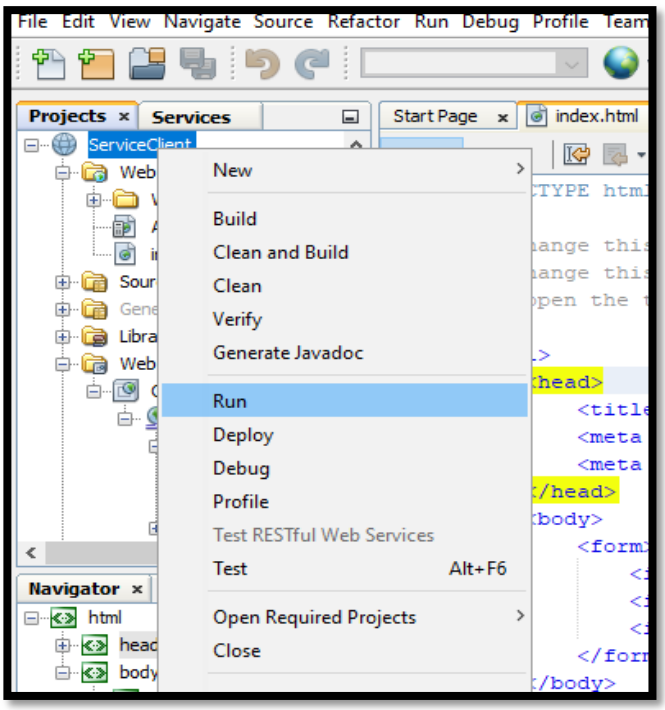

31. Now **open index.html file of ServiceClient** project and **replace the contents of body tag with following code**. **After that press Ctrl+S** to save it.

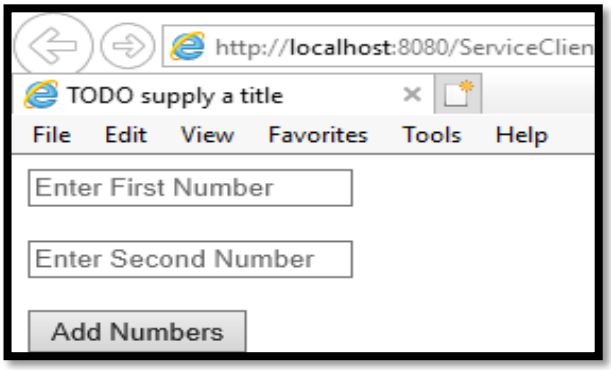

```
<form>
        <input type="text" name="txt1" placeholder="Enter First
        Number"><br><br>
        <input type="text" name="txt2" placeholder="Enter Second
        Number"><br><br>
        <input type="submit" formaction="Add.jsp" value="Add Numbers">
</form>
```

32. Now **run the ServerClient** web application.

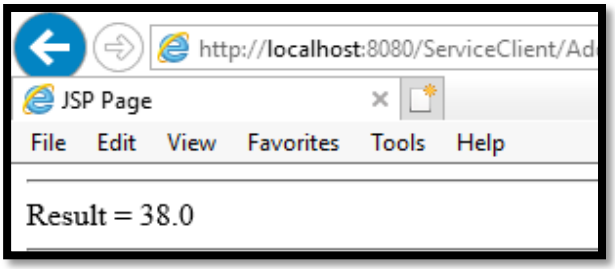

33. A window will open in browser as below.

34. Now **enter two numbers and click on Add Numbers button. Wait to get result**……..

You will get result on a new page.
