Practical No. 7

Aim: Implement a RESTful web service that accepts the details to be stored in a database and performs CRUD operation.

What is Entity Class?

An **Entity class** in Java is a class that represents a **table in a database**.

An Entity class is a Java class that maps Java objects to rows and columns of a database table, allowing JPA to store, retrieve, update, and delete database records easily.

What is JSF Page?

- **JSF page** means a **JavaServer Faces page**. In NetBeans, you may see an option to create a **JSF Page** when developing a Java EE web application.

JSF = JavaServer Faces

- JSF is a Java web framework used to create the **user interface (UI)** of a Java web application.

A JSF page usually has the extension:

.xhtml

- **What does a JSF page do?**

Suppose you want to create a form for entering student details.

A JSF page can contain:

Student ID: [_____]

Name: [_____]

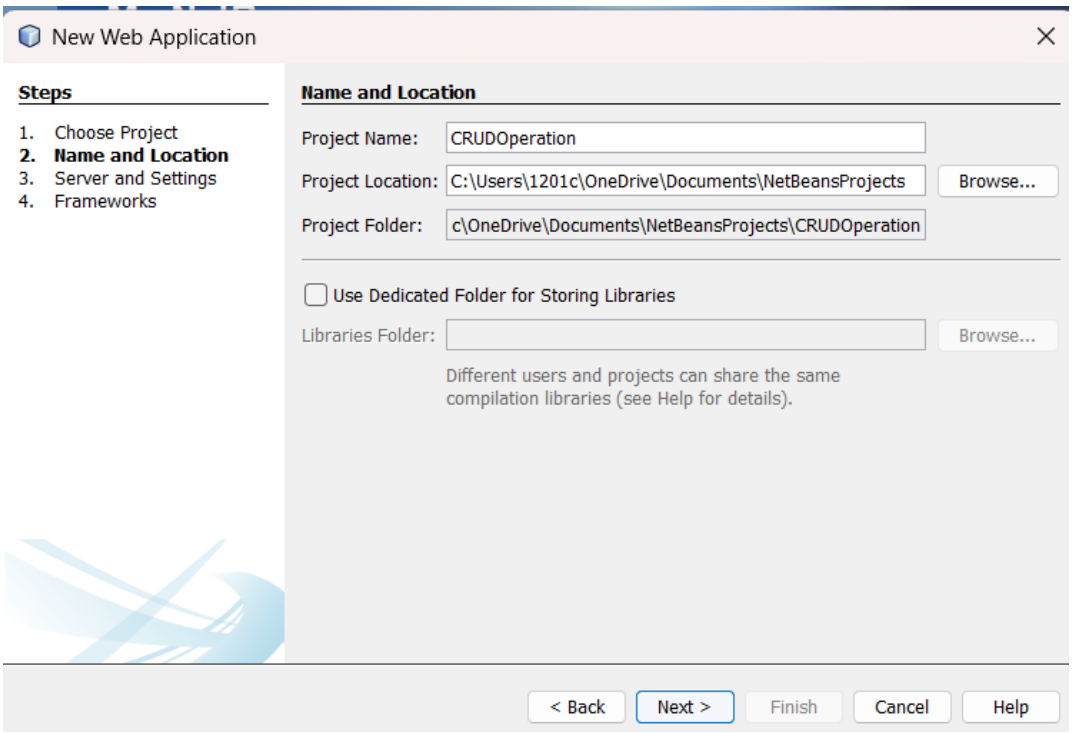

Course: [_____]

[SAVE]

The user enters the information and clicks **Save**.

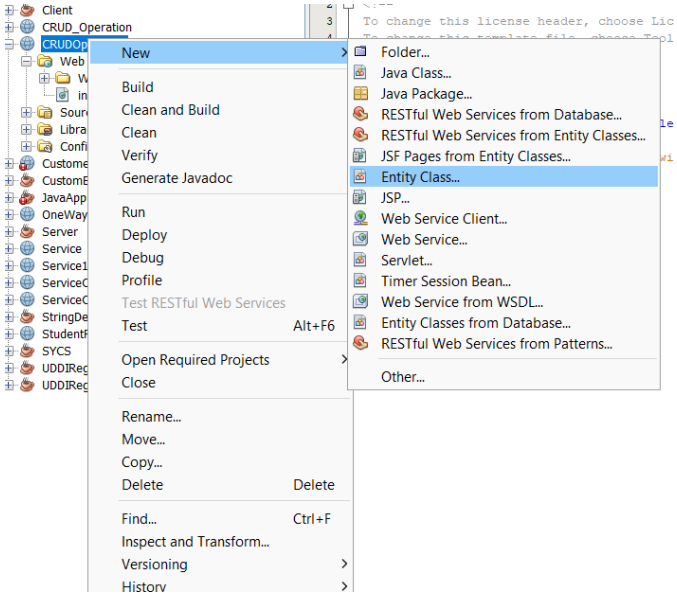

- JSF can send the data to a Java backing bean, which can then communicate with JPA/database.

Step 1: Create new Web Application in NetBeans and give it name as CRUDOperation.

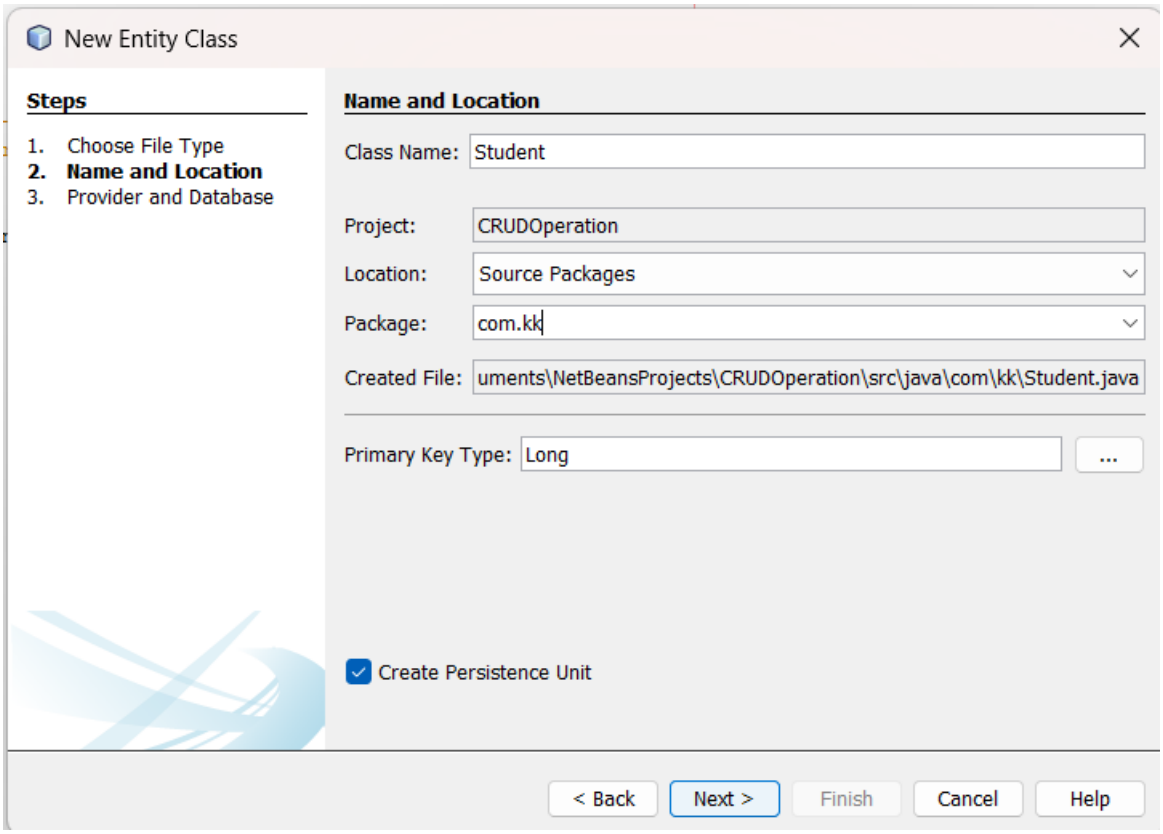

Click on Next and Finish

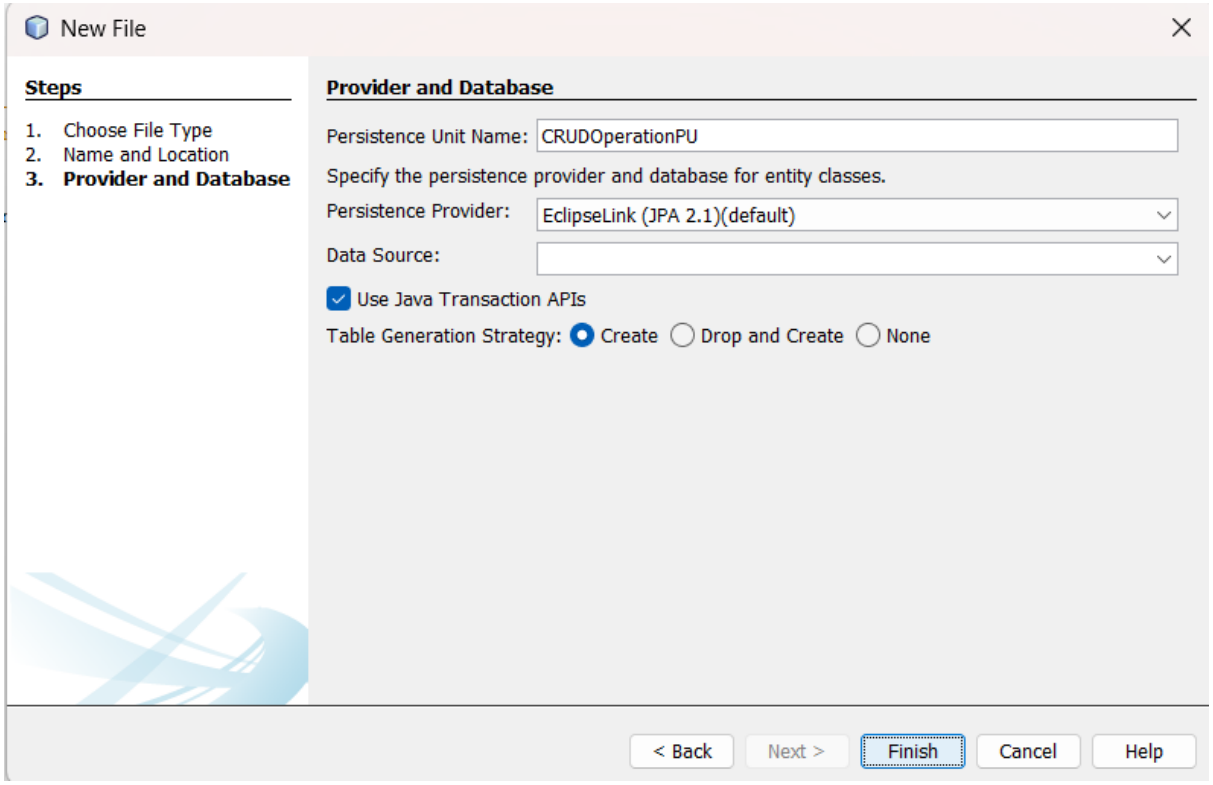

Step 2: Now right click on your project and then select Entity Class

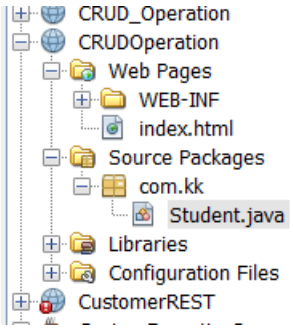

Give name as Student and Package name as com.kk

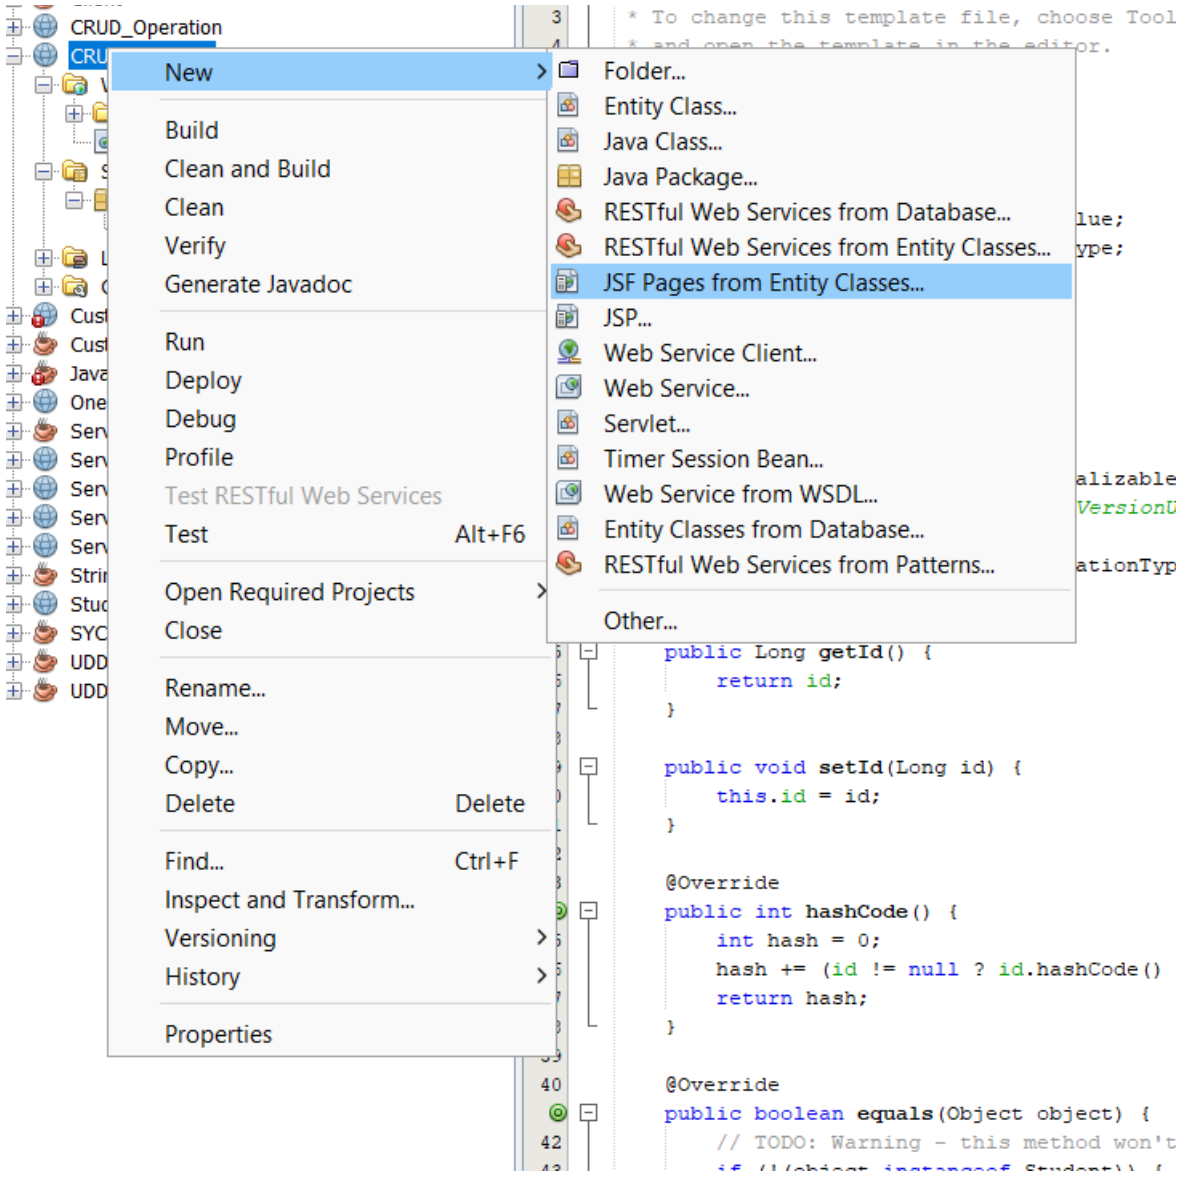

Then next and finish.

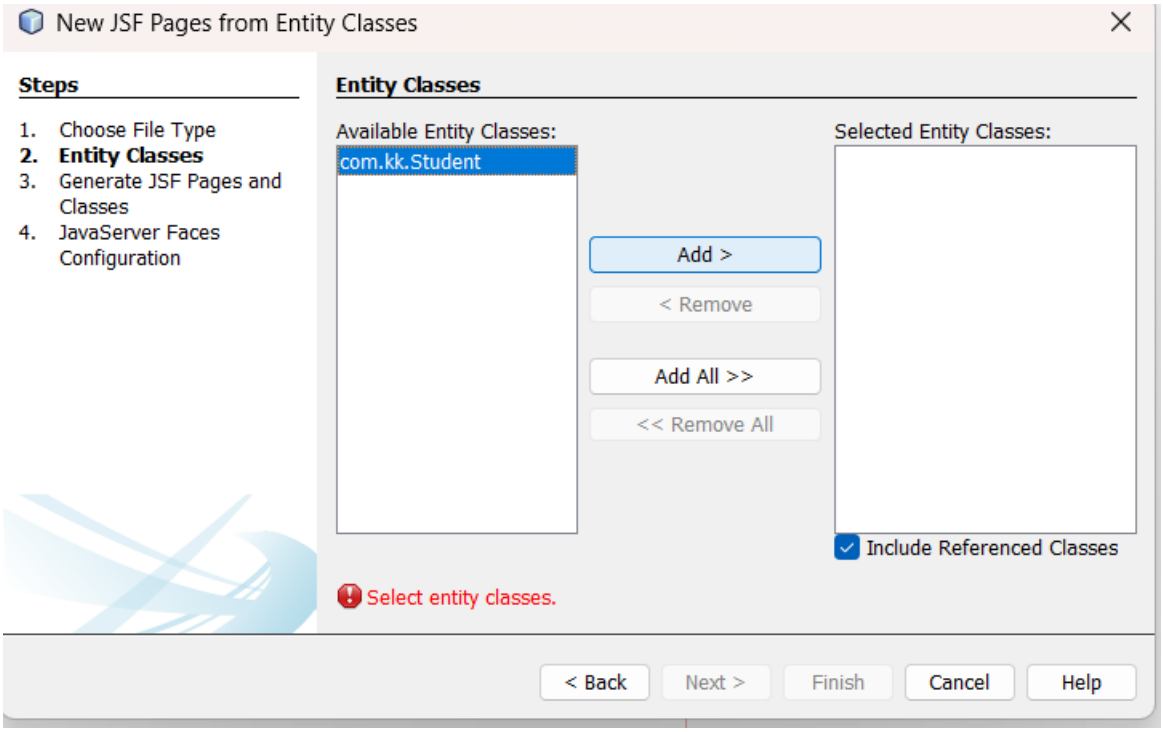

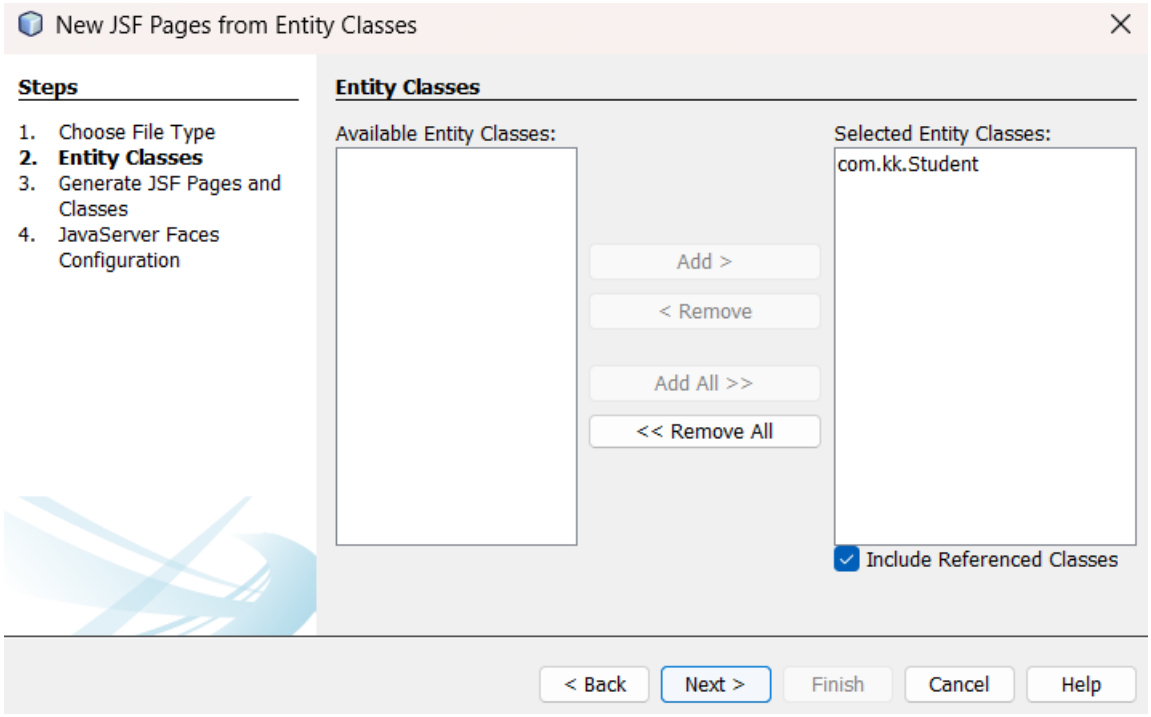

Step 3: Now right click on your project and select JFS pages from Entity classes

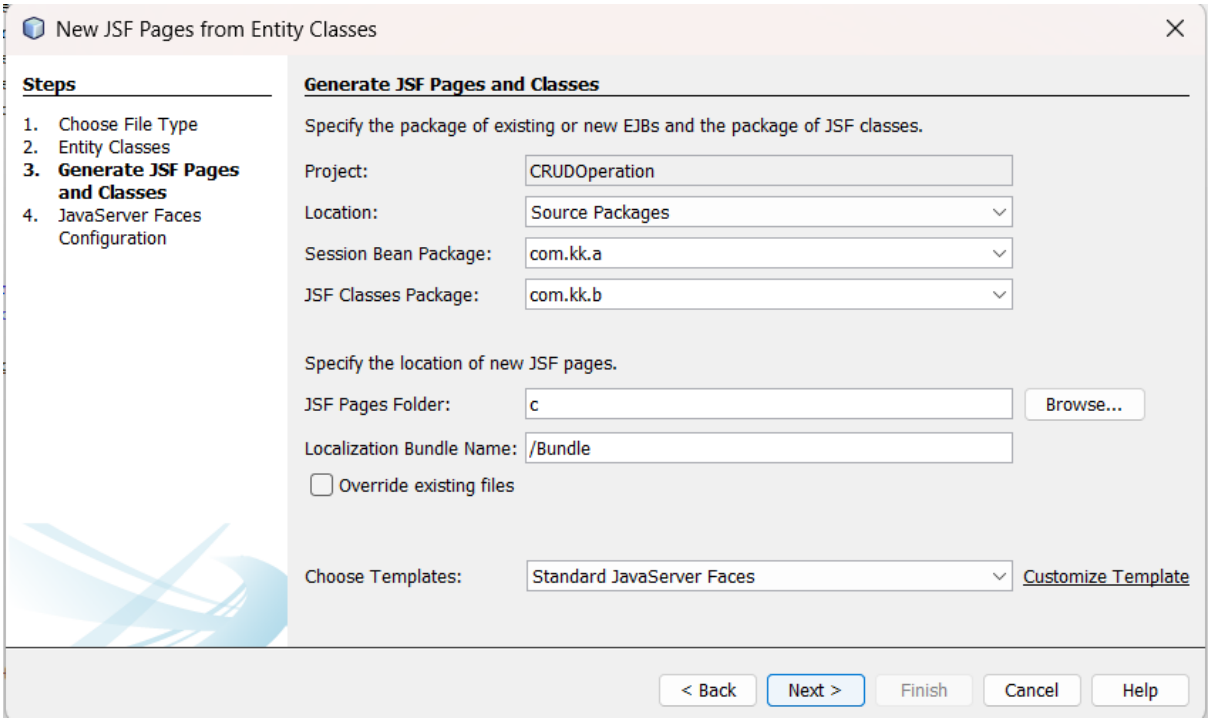

Then select the entity and Add.

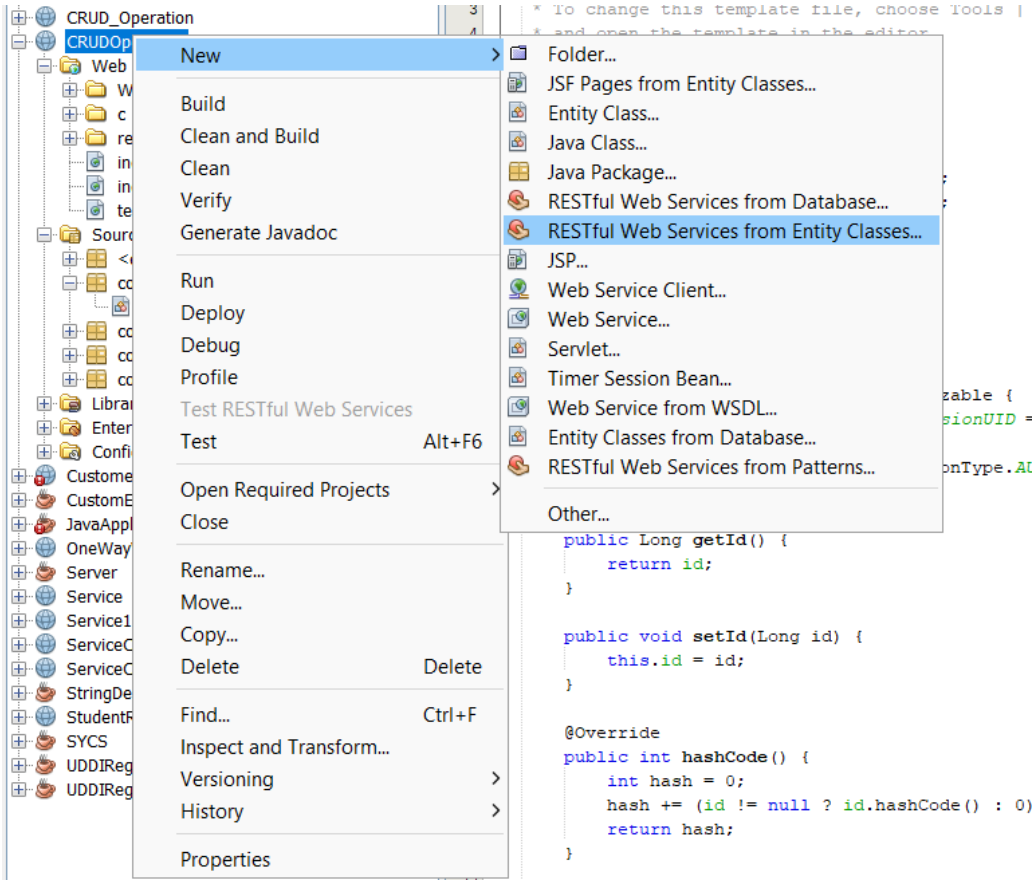

Do needful changes as given bellow.

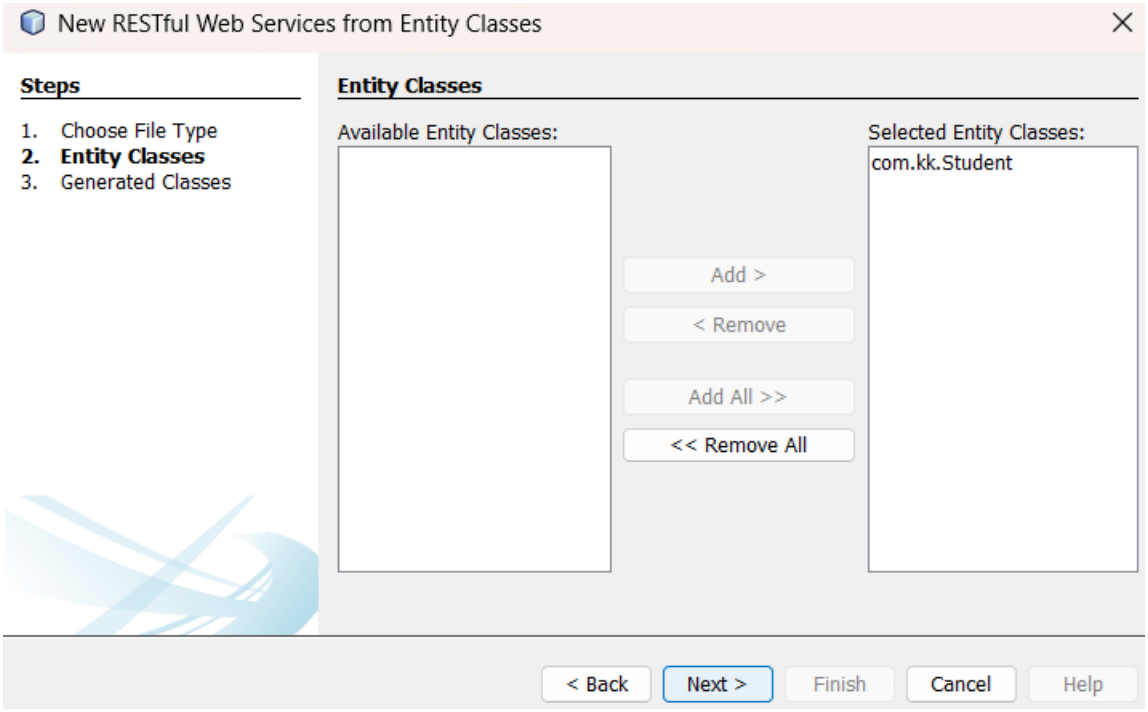

Now click on next and finish.

Step 4: Right click on your project and choose RESTful web services for entity class.

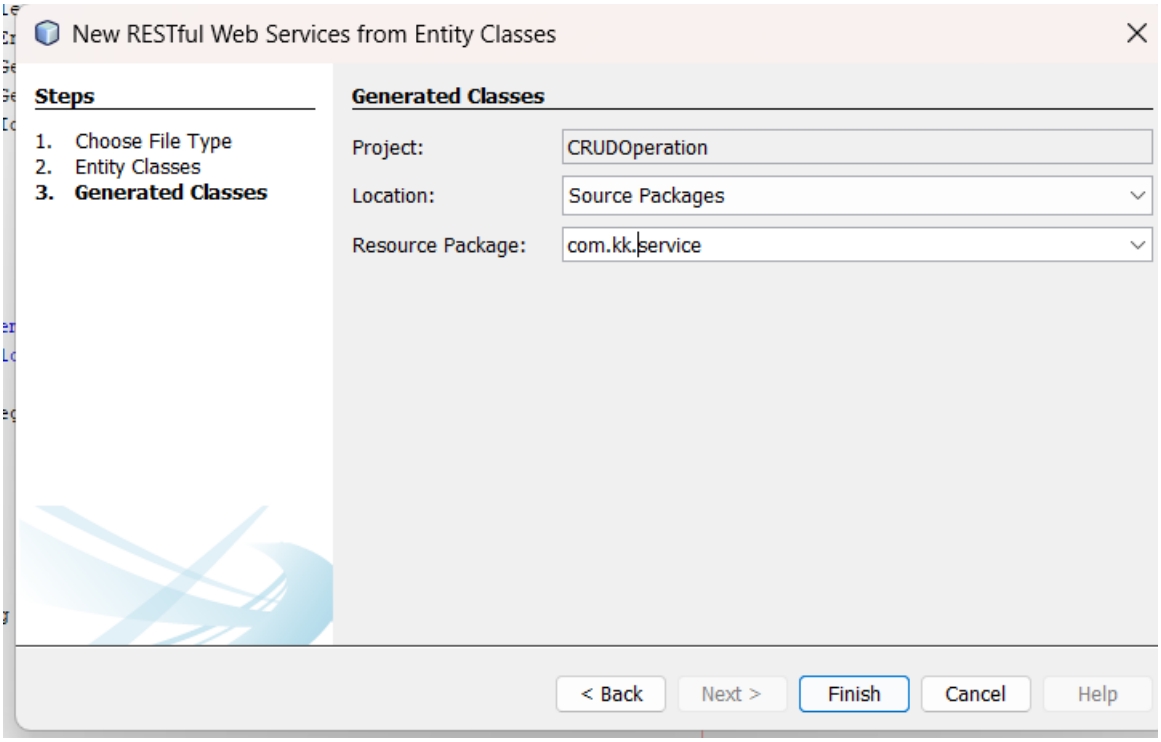

Add Student

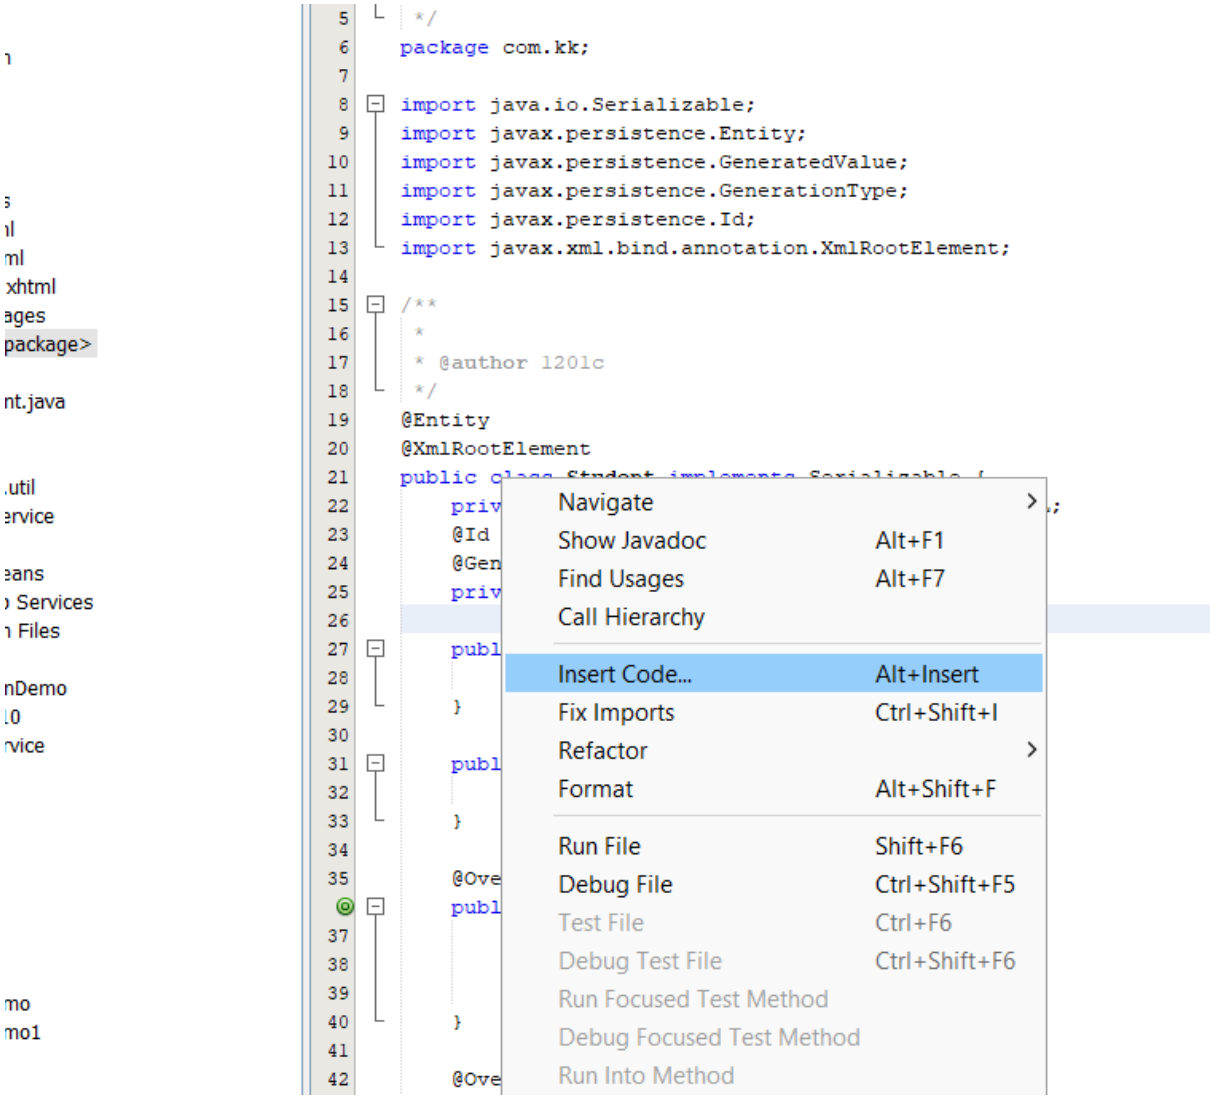

Then click on next.

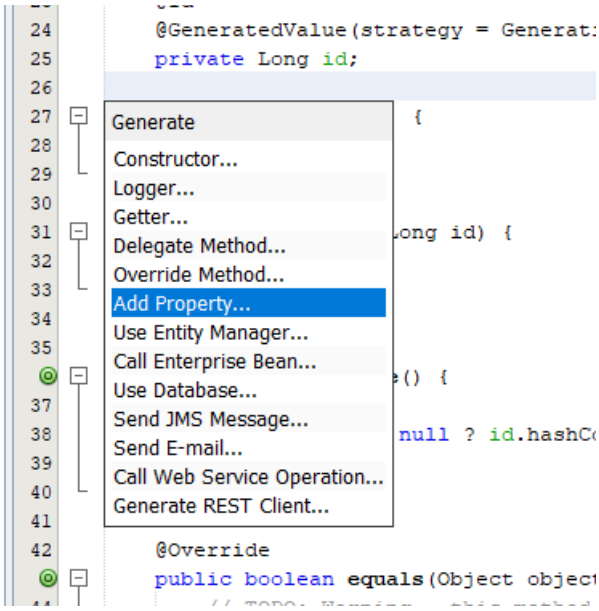

Now give package name as com.kk.service and finish.

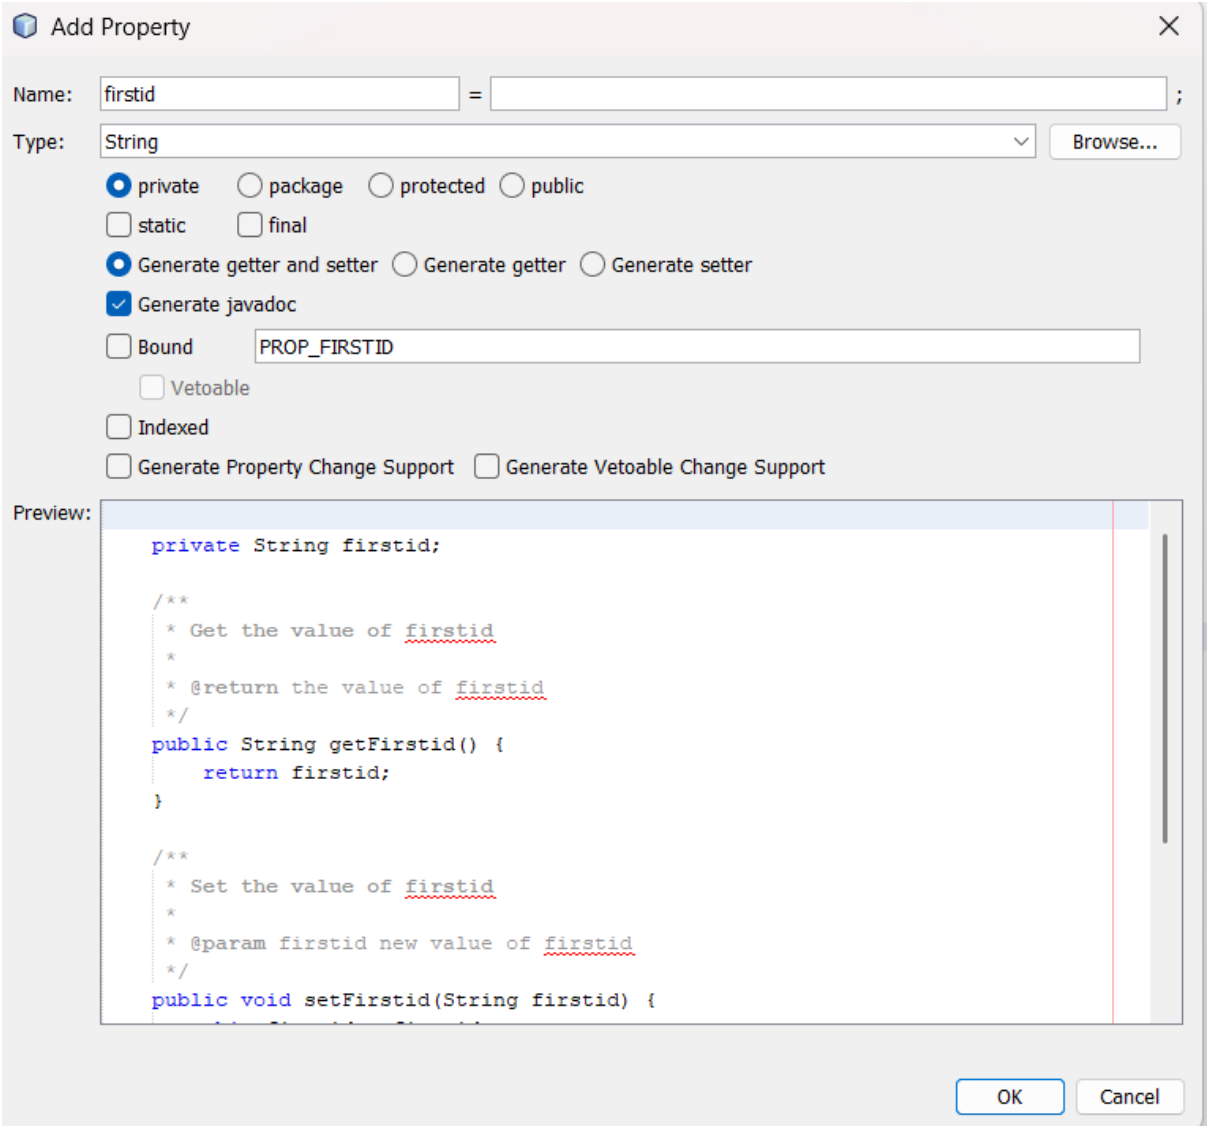

Step 5: Now open Student.java file and after the private long right click on section and click on insert code

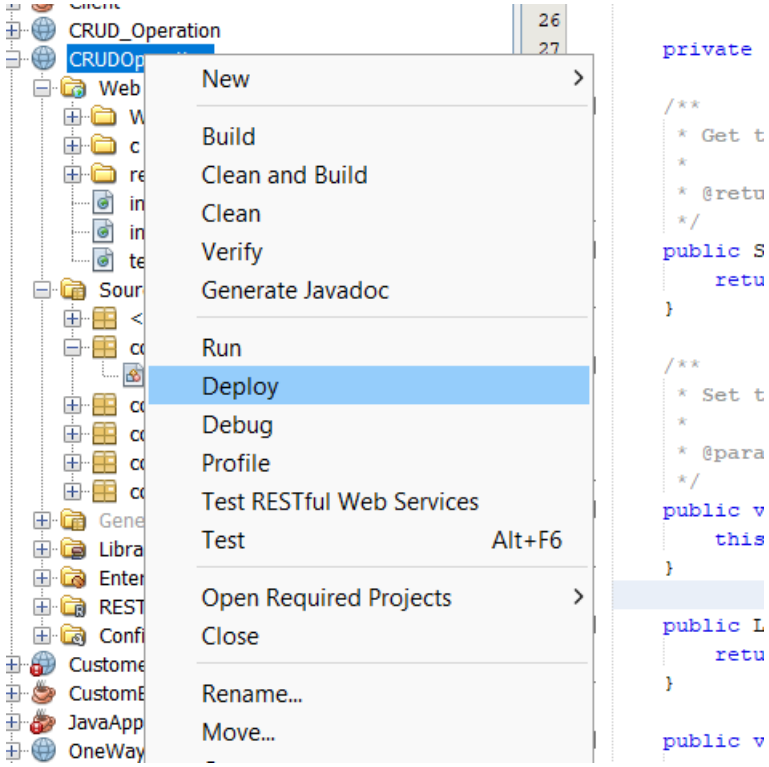

Now select add property.

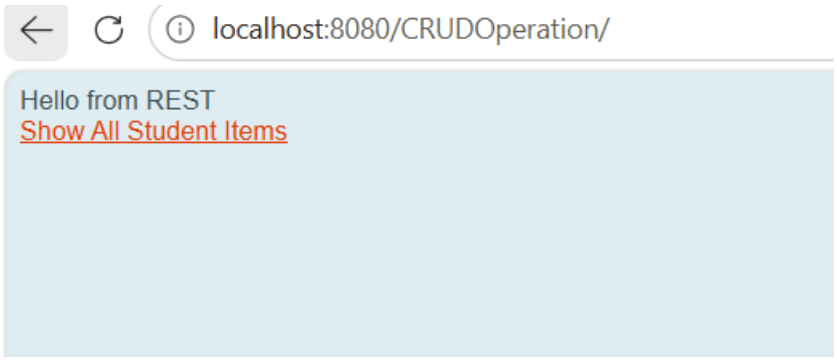

Give it name as firstid and click on OK.

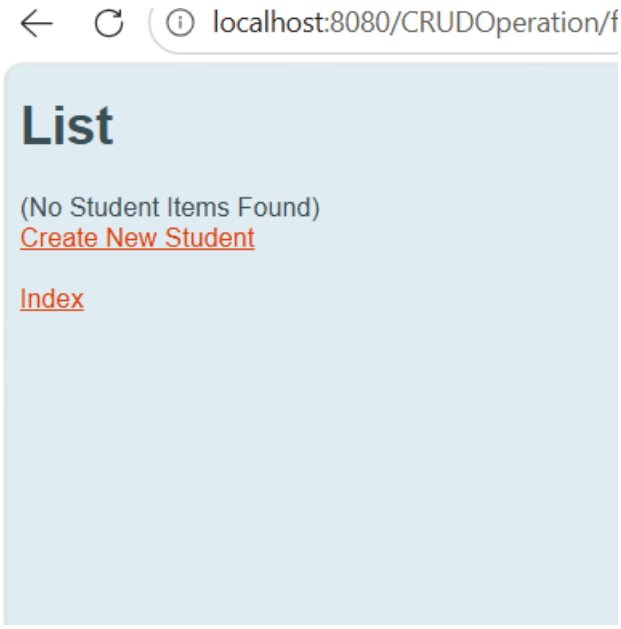

Step 6: Right click your project and do clean and build. After successful build deploy your project.

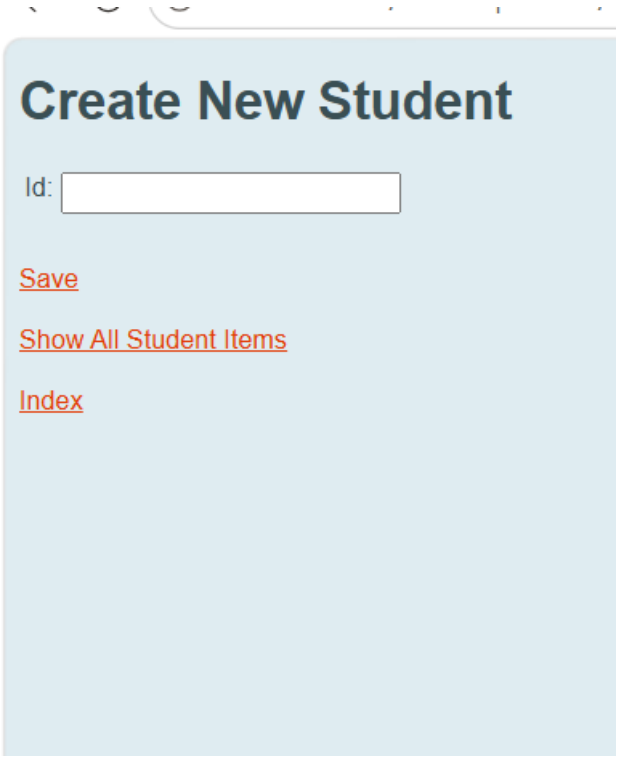

After execution you will get output.

Now click on show all student items.

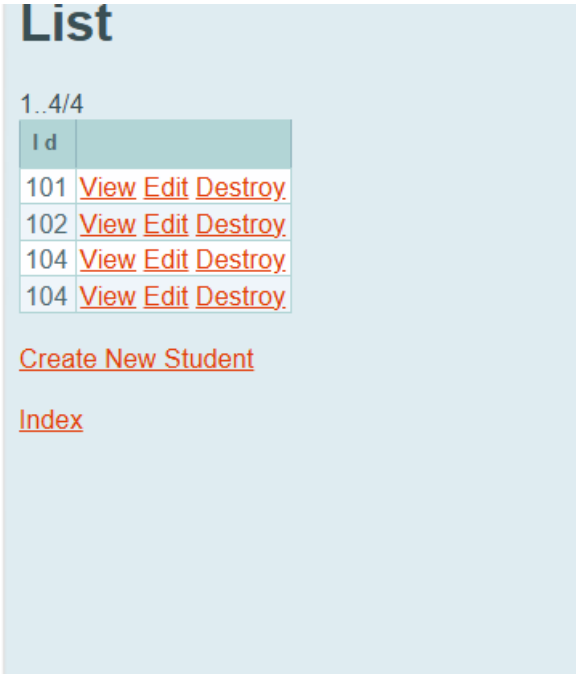

Click on create new student

Give id no. according to your choice and save it one by one.

Now click on show all students items.

You all can see they give us rights to view, eidt and delete the data.
